Hermenegildo, J. Maluszynski, 2006-12-31 Coordinating production across a supply chain designing a new VLSI chip allocating classrooms or scheduling maintenance crews at an airport are just a few examples of complex combinatorial problems that can be modeled as a set of decision variables whose values are subject to a set of constraints The decision variables may be the time when production of a particular lot will start or the plane that a maintenance crew will be working on at a given time Constraints may range from the number of students you can't in a given classroom to the time it takes to transfer a lot from one plant to another Despite advances in computing power many forms of these and other combinatorial problems have continued to defy conventional programming approaches Constraint Logic Programming CLP first emerged in the mid eighties as a programming technique with the potential of significantly reducing the time it takes to develop practical solutions to many of these problems by combining the expressiveness of languages such as Prolog with the computational power of constrained search While the roots of CLP can be traced to Monash University in Australia it is without any doubt in Europe that this new software technology has gained the most prominence benefiting among other things from sustained funding from both industry and public R D programs over the past dozen years These investments have already paid off resulting in a number of popular commercial solutions as well as the creation of several successful European startups

Natural Language Understanding and Logic Programming, II Veronica Dahl, Patrick Saint-Dizier, 1988 Natural language semantics and pragmatics are now two major fields in linguistics philosophy artificial intelligence and computational linguistics With the development of large and efficient Prolog interpreters and compilers and with the expansion of the theoretical aspects of logic programming the study of natural language semantics and related pragmatic aspects is now becoming a very attractive topic The proceedings of this workshop reflect these trends The papers cover almost all the current research fields in natural language including morphology syntax parser design generation feature checking and specification semantic representations and construction of cooperative responses Articles on syntax deal with constraints to parsing and generation rule pruning and comparison of logic based language systems The material on the compilers involves functional logic grammars and unification based grammars The work on semantics investigates logico semantic induction data semantics comparatives conceptual graphs discourse representation and graphs Papers on pragmatics discuss disambiguation cooperation with the user through integrity constraints and question interpretation through epistemic reasoning Panel discussions are centered around future directions of research as well as comparisons between different points of view about actual research projects

Lloyd,1994-04 G del is a new general purpose declarative programming language that is based on the paradigm of logic programming and can be regarded as a successor to Prolog This book gives a tutorial overview of G del presents example programs provides a formal definition of the syntax and semantics of the language and covers background material on logic The G del language supports types and modules It has a rich collection of system modules and provides constraint solving in several domains It also offers metalogical facilities that provide significant support for metaprograms that do analysis transformation compilation verification debugging and the like The declarative nature of G del makes it well suited for use as a teaching language narrows the gap that currently exists between theory and practice in logic programming makes possible advanced software engineering tools such as declarative debuggers and compiler generators reduces the effort involved in providing a parallel implementation of the language and offers substantial scope for parallelization in such implementations Logic Programming series **Database and Expert Systems Applications** A Min Tjoa,Isidro Ramos,2012-12-06 The Database and Expert Systems Application DEXA conferences are mainly oriented to establish a state of the art forum on Database and Expert System applications But Practice without Theory has no sense as Leonardo said five centuries ago In this Conference we try a compromise between these two complementary aspects A total of 5 sessions are application oriented ranging from classical applications to more unusual ones in Software Engineering Recent research aspects in Databases such as activity deductivity and or Object Orientation are also present in DEXA 92 as well as the implication of the new data models such as OO Model Deductive Model etc included in the Modelling sessions Other areas of interest such as Hyper Text and Multimedia application together with the classical field of Information Retrieval are also considered Finally Implementation Aspects are reflected in very concrete fields A total of of nearly 200 papers submitted from all over the world were sent to DEXA 92 Only 90 could be accepted A Poster session has also been established DEXA 90 was held in Vienna Austria DEXA 91 in Berlin Germany and DEXA 92 will take place in Valencia Spain where we are celebrating the discovery of the New World just five centuries ago in Leonardo s age Both the quality of the Conference and the compromise between Practice and Theory are due to the credit of all the DEXA 92 authors *Atti del Congresso Nuovi problemi della logica e della filosofia della scienza: Logica* ,1991 *ICCI '93, Fifth International Conference on Computing and Information, May 27-29, 1993, Sudbury, Ontario, Canada* Osman Abou-Rabia,Carl K.
