Innovations in Undergraduate STEM Education, 2011-05-19 Numerous teaching learning assessment and institutional

innovations in undergraduate science technology engineering and mathematics STEM education have emerged in the past

decade Because virtually all of these innovations have been developed independently of one another their goals and purposes

vary widely Some focus on making science accessible and meaningful to the vast majority of students who will not pursue

STEM majors or careers others aim to increase the diversity of students who enroll and succeed in STEM courses and

programs still other efforts focus on reforming the overall curriculum in specific disciplines In addition to this variation in

focus these innovations have been implemented at scales that range from individual classrooms to entire departments or

institutions By 2008 partly because of this wide variability it was apparent that little was known about the feasibility of

replicating individual innovations or about their potential for broader impact beyond the specific contexts in which they were

created The research base on innovations in undergraduate STEM education was expanding rapidly but the process of

synthesizing that knowledge base had not yet begun If future investments were to be informed by the past then the field

clearly needed a retrospective look at the ways in which earlier innovations had influenced undergraduate STEM education

To address this need the National Research Council NRC convened two public workshops to examine the impact and

effectiveness of selected STEM undergraduate education innovations This volume summarizes the workshops which addressed such topics as the link between learning goals and evidence promising practices at the individual faculty and institutional levels classroom based promising practices and professional development for graduate students new faculty and veteran faculty The workshops concluded with a broader examination of the barriers and opportunities associated with systemic change
