Virtual Computing Concept Design And Evaluation:

Virtual Computing Dongmin Kim, Salim Hariri, 2012-12-06 The evolution of modern computers began more than 50 years ago and has been driven to a large extent by rapid advances in electronic technology during that period The first computers ran one application user at a time Without the benefit of operating systems or compilers the application programmers were responsible for managing all aspects of the hardware The introduction of compilers allowed programmers to express algorithms in abstract terms without being concerned with the bit level details of their implementation Time sharing operating systems took computing systems one step further and allowed several users and or applications to time share the computing services of computers With the advances of networks and software tools users and applications were able to time share the logical and physical services that are geographically dispersed across one or more networks Virtual Computing VC concept aims at providing ubiquitous open computing services in analogous way to the services offered by Telephone and Electrical utility companies The VC environment should be dynamically setup to meet the requirements of a single user and or application The design and development of a dynamically programmable virtual computing environments is a challenging research problem However the recent advances in processing and network technology and software tools have successfully solved many of the obstacles facing the wide deployment of virtual computing environments as will be outlined next *Proceedings of the 21st Congress of the International Ergonomics Association (IEA 2021)* Nancy L.
