Biomedical Signal Processing for Healthcare Applications Varun Bajaj, G. R. Sinha, Chinmay Chakraborty, 2021-07-20 This book examines the use of biomedical signal processing EEG EMG and ECG in analyzing and diagnosing various medical conditions particularly diseases related to the heart and brain In combination with machine learning tools and other optimization methods the analysis of biomedical signals greatly benefits the healthcare sector by improving patient outcomes through early reliable detection The discussion of these modalities promotes better understanding analysis and application of biomedical signal processing for specific diseases The major highlights of Biomedical Signal Processing for Healthcare Applications include biomedical signals acquisition of signals pre processing and analysis post processing and classification of the signals and application of analysis and classification for the diagnosis of brain and heart related diseases Emphasis is given to brain and heart signals because incomplete interpretations are made by physicians of these aspects in several situations and these partial interpretations lead to major complications

FEATURES Examines modeling and acquisition of biomedical signals of different disorders Discusses CAD based analysis of diagnosis useful for healthcare Includes all important modalities of biomedical signals such as EEG EMG MEG ECG and PCG Includes case studies and research directions including novel approaches used in advanced healthcare systems This book can be used by a wide range of users including students research scholars faculty and practitioners in the field of biomedical engineering and medical image analysis and diagnosis

Drug Design Gerhard Klebe, 2025-02-04 This English language textbook based on the successful German edition Wirkstoffdesign brings the subject of drug design back to the cutting edge of research The reader learns about new methods in genetic engineering and the expanded range of structural biological methods Especially in the last 10 years many complex target structures such as G protein coupled receptors or ion channels have been elucidated by using these methods The reader learns how these long sought complex structures with classical drugs look like and how the therapeutic effect is achieved This textbook is aimed at students of pharmacy chemistry and the life sciences but

also at career changers and medicinal chemists in research and development departments of the pharmaceutical industry Conceptually it is very different from classical textbooks on pharmaceutical chemistry It focuses on the path to a new drug substance The selection of case studies is based on didactic aspects and attempts to give a broad overview of methods and strategies without forgetting to look back at the beginnings of this field of work Thus the arc spans from the history of drug research the mechanisms of action of drugs and the methods for lead structure search and optimisation to structure determination methods modelling molecular dynamics and QSAR methods to structure and computer aided design This textbook also discusses new methods and concepts such as epigenetics the PROTAC approach CRISPR Cas9 gene scissors structural predictions from sequence the use of artificial intelligence and new screening technologies from biophysics It presents successes in disrupting or enhancing protein protein interactions as a concept for drug therapy and discusses optimising drugs considering their thermodynamic as well as kinetic binding profiles Videos via app simply download the SN More Media app free of charge scan a link with the play button and immediately play the video on your smartphone or tablet
