

WISUAL BASIC 4

1. The first part of the course is a general introduction to the field of visual basic programming. This includes a discussion of the history of the language and its current applications. The second part of the course is a detailed look at the basic syntax and semantics of the language. This includes a discussion of the various data types and operators available in the language, as well as the rules for writing valid code. The third part of the course is a hands-on introduction to the Visual Basic IDE. This includes a discussion of the various components of the IDE, such as the code editor, the object browser, and the properties window. The fourth part of the course is a detailed look at the various controls available in the Visual Basic toolbox. This includes a discussion of the various types of controls, such as buttons, text boxes, and list boxes, and how they are used in a program. The fifth part of the course is a detailed look at the various methods available for the various controls. This includes a discussion of the various events that can be raised by the controls, and how they are handled by the program. The sixth part of the course is a detailed look at the various classes available in the Visual Basic class library. This includes a discussion of the various types of classes, such as forms, controls, and data objects, and how they are used in a program. The seventh part of the course is a detailed look at the various techniques available for creating user interfaces. This includes a discussion of the various types of user interfaces, such as dialog boxes, wizards, and wizards, and how they are created. The eighth part of the course is a detailed look at the various techniques available for creating data-driven applications. This includes a discussion of the various types of data-driven applications, such as data entry forms, data reports, and data queries, and how they are created. The ninth part of the course is a detailed look at the various techniques available for creating network applications. This includes a discussion of the various types of network applications, such as client-server applications, peer-to-peer applications, and web applications, and how they are created. The tenth part of the course is a detailed look at the various techniques available for creating distributed applications. This includes a discussion of the various types of distributed applications, such as distributed databases, distributed file systems, and distributed object systems, and how they are created.

2. The second part of the course is a detailed look at the basic syntax and semantics of the language. This includes a discussion of the various data types and operators available in the language, as well as the rules for writing valid code.
