Visual Representations And Interpretations:

Visual Representations and Interpretations Ray Paton, Irene Neilsen, 2012-12-06 The value of multi disciplinary research and the exchange of ideas and methods across traditional discipline boundaries are well recognised Indeed it could be justifiably argued that many of the advances in science and engineering take place because the ideas methods and the tools of thought from one discipline become re applied in others Sadly it is also the case that many subject areas develop specialised vocabularies and concepts and can consequently approach more general problems in fairly narrow subject specific ways Consequently barriers develop between disciplines that prevent the free flow of ideas and the collaborations that on Visual Representations could often bring success VRI 98 a workshop focused Interpretations was intended to break down such barriers The workshop was held in the Foresight Conference Centre which occupies part of the former Liverpool Royal Infirmary a Grade 2 listed building which has been recently restored The building combines a majestic architecture with the latest in new conference facilities and technologies and thus provided a very suitable setting for a workshop aimed at bringing the Arts and the Sciences together of the workshop was to promote inter disciplinary awareness across The main aim a range of disciplines where visual representations and interpretations are exploited Contributions to the workshop were therefore invited from researchers who are actively investigating visual representations and interpretations artists architects biologists chemists clinicians cognitive scientists computer scientists educationalists engineers graphic designers linguists mathematicians philosophers physicists psychologists and social scientists

Multidisciplinary Approaches to Visual Representations and Interpretations, 2004-12-09 The value of multi disciplinary research lies in the exchange of ideas and methods across the traditional boundaries between areas of study It could be argued that many of the advances in science and engineering take place because the ideas methods and the tools of thought from one discipline become re applied in another The topic of the visual has become increasingly important as advances in technology have led to multi media and multi modal representations and extended the range and scope of visual representation and interpretation in our lives Under this broad heading there are many different perspectives and approaches from across the entire spectrum of human knowledge and activity The editors and authors of this book aim to break down cross disciplinary barriers by bringing together people working in a wide variety of disciplines where visual representations and interpretations are exploited Contributions come from researchers actively investigating visual representations and interpretations in a wide variety of areas including art history biology clinical science cognitive science computer science design engineering linguistics mathematics philosophy physics psychology and sociology The book provides a forum for wide ranging and multi disciplinary contributions on visual representations and interpretations Contributors include researchers actively investigating visual representations and interpretations Content spans a wide variety of areas including but not limited to biology sociology and computer science Discusses how new technology has affected the visual representation of information

Towards a Framework for Representational Competence in Science Education Kristy L. Daniel, 2018-06-20 This book covers the current state of thinking and what it means to have a framework of representational competence and how such theory can be used to shape our understanding of the use of representations in science education assessment and instruction Currently there is not a consensus in science education regarding representational competence as a unified theoretical framework There are multiple theories of representational competence in the literature that use differing perspectives on what competence means and entails Furthermore dependent largely on the discipline language discrepancies cause a potential barrier for merging ideas and pushing forward in this area While a single unified theory may not be a realistic goal there needs to be strides taken toward working as a unified research community to better investigate and interpret representational competence An objective of this book is to initiate thinking about a representational competence theoretical framework across science educators learning scientists practitioners and scientists As such we have divided the chapters into three major themes to help push our thinking forward presenting current thinking about representational competence in science education assessing representational competence within learners and using our understandings to structure instruction
