Tsetse The Future For Biological Methods In Integrated Control:

Tsetse Marshall Laird, International Development Research Centre (Canada), 1977-01-01 *Tsetse and Trypanosomiasis Information Quarterly*, 2003 *Medical and Veterinary Entomology* Gary R. Mullen, Lance A. Durden, 2009-04-22 *Medical and Veterinary Entomology* Second Edition has been fully updated and revised to provide the latest information on developments in entomology relating to public health and veterinary importance Each chapter is structured with the student in mind organized by the major headings of Taxonomy Morphology Life History Behavior and Ecology Public Health and Veterinary Importance and Prevention and Control This second edition includes separate chapters devoted to each of the taxonomic groups of insects and arachnids of medical or veterinary concern including spiders scorpions mites and ticks Internationally recognized editors Mullen and Durden include extensive coverage of both medical and veterinary entomological importance This book is designed for teaching and research faculty in medical and veterinary schools that provide a course in vector borne diseases and medical entomology parasitologists entomologists and government scientists responsible for oversight and monitoring of insect vector borne diseases and medical and veterinary school libraries and libraries at institutions with strong programs in entomology Follows in the tradition of *Herm s Medical and Veterinary Entomology* The latest information on developments in entomology relating to public health and veterinary importance Two separate indexes for enhanced searchability Taxonomic and Subject New to this edition Three new chapters Morphological Adaptations of Parasitic Arthropods Forensic Entomology Molecular Tools in Medical and Veterinary Entomology 1700 word glossary Appendix of Arthropod Related Viruses of Medical Veterinary Importance Numerous new full color images illustrations and maps throughout Outlines of Entomology R. G. Davies, 2013-11-11 The present edition may be regarded as a descendant much changed and greatly enlarged of the late Dr A D Imms *Outlines of Entomology* first published in 1942 This went through three further editions without much change but after the death of the original author a fifth revised edition by Professor o W Richards and myself appeared in 1959 and a sixth in 1978 The book now appears in a considerably extended version in which I have tried to provide a more balanced introduction to the whole field of modern entomology by dealing with several aspects of the subject not discussed at all in previous editions Thus in addition to innumerable lesser changes in the sections on insect structure function development classification and phylogeny I have completely recast the earlier chapter on some important modes of life in insects This now includes a far wider range of biological topics well exemplified by the insects and should I hope appeal not only to those already dedicated to entomology but also to others with more general biological interests A completely new chapter on the biology of insect populations has also been added and may serve to indicate the debt which modern ecological theory owes to work on insect populations It should hardly be necessary to apologize for introducing a certain amount of elementary mathematics into this account of a subject which is now among the most highly quantitative of biological disciplines **Demography and Vector-Borne Diseases** Michael W.

Service, 2024-11-01 An in depth overview on the demographic changes occurring world wide and the repercussions this is having on the pattern of vector borne disease is presented in this book Internationally recognized scientists epidemiologists entomologists parasitologists and ecologists are contributing authors to this comprehensive account **Memoirs of the Entomological Society of Canada** ,1997 **Canadian Journal of Zoology** ,1982 **Pest and Vector Management in the Tropics** Anthony Youdeowei, M. W. Service, 1983 Overview of pest and vector problems in the tropics Concepts of pests and vectors and their management Role of insecticides in integrated pest and vector management Sampling methods for pest and vector management Quantitative procedures after sampling Management of plant pest Management of vectors Relationships between development programmes and health Socio economic considerations in the management of tropical pests and disease vectors Training and policies of pest and vector management *The Biology of Trypanosoma and Leishmania, Parasites of Man and Domestic Animals* D. H. Molyneux, R. W. Ashford, 1983 *Draft Reference Data Set: Epidemiology. Pt. 1, Communicable diseases* ,1989 **Perspectives in Trypanosomiasis Research** John Robin Baker, 1982 *Tropical Pest Management* ,1991 Microbial Ecology M.W. Loutit, J.A.R. Miles, 1978-11 The suggestion for a symposium on microbial ecology was first put forward by Professor J A R Miles in 1972 After gaining support from the New Zealand Microbiological Society and the Royal Society of New Zealand a national committee with international representatives and a local committee were formed Sponsorship was obtained from UNEP UNESCO ICRO and IOMS IUBS and ICOME and the culmination was the First International Microbial Ecology Symposium in 1977 attended by over 400 scientists from 30 countries Certain facets of microbial ecology have been studied for over a century but the recognition of microbial ecology as a discipline has come relatively recently The National Committee decided that all aspects of microbial ecology should be discussed at the Symposium The local organising committee therefore invited papers on the ecology of microorganisms and viruses associated with plants and animals as well as microorganisms associated with soil and water and with general environmental problems Of the 240 papers presented only a selection is published here It is hoped that they will be of interest particularly to those who could not attend The volume stands as a tribute to the foresight of John Miles in instigating the symposium and who retires this year from the Microbiology Department of the University of Otago where he has had a distinguished career May his interest in microbial ecology long continue Medical Insects and Arachnids R.P. Lane, R.W. Crosskey, 2012-12-06 Surprising though it seems the world faces almost as great a threat today from arthropod borne diseases as it did in the heady days of the 1950s when global eradication of such diseases by eliminating their vectors with synthetic insecticides particularly DDT seemed a real possibility Malaria for example still causes tremendous morbidity and mortality throughout the world especially in Africa Knowledge of the biology of insect and arachnid disease vectors is arguably more important now than it has ever been Biological research directed at the development of better methods of control becomes even more important in the light of the partial failure of many control schemes that are based on insecticide

although not all is gloom since basic biological studies have contributed enormously to the outstanding success of international control programmes such as the vast Onchocerciasis Control Programme in West Africa It is a sine qua non for proper understanding of the epidemiology and successful vector control of any human disease transmitted by an arthropod that all concerned with the problem medical entomologist parasitologist field technician have a good basic understanding of the arthropod s biology Knowledge will be needed not only of its direct relationship to any parasite or pathogen that it transmits but also of its structure its life history and its behaviour in short its natural history Above all it will be necessary to be sure that it is correctly identified
