Leonid Yaroslavsky, 2013-03-14 Digital holography and digital image processing are twins born by computer era They share origin theoretical base methods and algorithms The present book describes these common fundamentals principles methods and algorithms including image and hologram digitization data compression digital transforms and efficient computational algorithms statistical and Monte Carlo methods image restoration and enhancement image reconstruction in tomography and digital holography discrete signal resampling and image geometrical transformations accurate measurements and reliable target localization in images recording and reconstruction of computer generated holograms adaptive and nonlinear filters for sensor signal perfecting and image restoration and enhancement The book combines theory heavily illustrated practical methods and efficient computational algorithms and is written for senior level undergraduate and graduate students researchers and engineers in optics photonics opto electronics and electronic engineering *Scientific and Technical Aerospace Reports*, 1995-08 **Handbook of Systems Engineering and Analysis of Electro-Optical and Infrared**

Systems William Wolfgang Arrasmith, 2025-06-30 There has been a lot of innovation in systems engineering and some fundamental advances in the field of optics imaging lasers and photonics that warrant attention This volume focuses on applications tools and techniques of systems engineering related topics from government industrial and academic settings such as development and operations DevOps agile methods and the concept of the digital twin Handbook of Systems Engineering and Analysis of Electro Optical and Infrared Systems Applications Tools and Techniques offers more information on the application of decision and risk analysis and statistical methods in systems engineering such as design of experiments DOX methods including statistical process control hypothesis testing analysis of variance blocking 2k factorial analysis and regression analysis It includes new material using model based systems engineering and systems architecture methods in a system level design application The integration of recent high speed atmospheric turbulence research results in the optical technical examples and case studies to illustrate the new developments is also included A presentation of new optical technical materials for adaptive optics AO and atmospheric turbulence compensation ATC systems that are based on illumination from passive sources natural light or active sources coherent light like from lasers provides the technical focus for the systems engineering methods and techniques Chapter 13 focuses on the technical aspects of the design process and uses the systems level design as an illustration In addition to covering lifecycle cost estimation methods and applying them to an integrated case study that is used to illustrate important concepts and techniques throughout this work the final section brings everything together in terms of technical cost and schedule performance Because this volume blends modern day systems engineering methods with detailed optical systems analysis and applies these methodologies to EO IR systems this

new edition is an excellent text for professionals in STEM disciplines that work with optical or infrared systems It s also a great practical reference text for the practicing engineer and a solid educational text for graduate level systems engineering engineering science and technology students This book is also available as a set Handbook of Systems Engineering and Analysis of Electro Optical and Infrared Systems 978 1 032 22242 4 Digital Image Recovery and Synthesis ,1996

Estimation-Theoretic Methods for Unconventional Imaging ,2001 The objective of this program was to perform basic research on the application of estimation theoretic processing methods for unconventional imaging systems Imaging applications involving both incoherent passive and coherent active illumination were investigated and results are described in this report for i lower bounds on the estimation accuracy for multi channel phase retrieval and ii dual channel signal recovery from auto and cross correlation data As a result of i insight is gained into the relative merits of a Hartmann sensor for wavefront estimation and the surprising result is obtained that a conventional image encodes more information about a wavefront than does a Hartmann sensor As a result of ii a novel processing method is derived for recovering two object functions from measurements of their auto and cross correlation functions Applications of Digital Image Processing ,1996

Applications of Digital Image Processing XIX Andrew G. Tescher,1996 *Photoinduced Electron Transfer* Marye Anne Fox,Michel Chanon,1988 Electron transfer reactions are of great importance to nearly every subdiscipline of chemistry The simple transfer of a single electron has been shown repeatedly to be a common activating mode for organic inorganic and biological molecules and the very ubiquity of such reactions has guaranteed that their investigation would involve the most fundamental questions of modern chemistry The fact that photoexcitation induces enhanced redox reactivity via electron transfer also provides a convenient method for experimentally testing theoretical predictions regarding structural and energetic effects As can be seen from the very size of this work there is a great deal known about photoinduced electron transfer reactions and the editors have tried to capture the diversity and excitement inherent in this broad field The reader will find contributions from theorists and experimentalists from organic and inorganic chemists from the perspective of the synthetic and mechanistic viewpoint Some contributions are fundamental basic research while others clearly show practical applications of these principles These volumes are intended to serve a joint purpose as a reference resource and an introductory overview to the diverse research accomplished via photoexcitation of electron donor acceptor systems The information is organized in four parts The first deals with the theoretical and conceptual factors which influence electron transfer The second covers experimental methodology and medium effects The third and fourth deal with reactivity with most organic transformation being addressed in Part C and most inorganic reactions covered in Part D Each part thus provides an overview of typical reactions observed for these classes of compounds Part D also provides examples of photoinduced electron transfer in current use in important applications There is of course a significant interdependence between the four
