Humans-with-Media and the Reorganization of Mathematical Thinking

Marcelo C. Borba, Monica E. Villarreal, 2005-07-25

As we enter into the 21st Century the presence of technology particularly techno science in everyday life is overwhelming

Institutions in the modern world are affected by this presence

Like Janus the ancient Roman god whose double faced head signified his knowledge of the present and the future education has always been a two faced enterprise

The past establishes goals and methods of Education and the other face tries to capture the future and suggests and proposes new directions of thought and new styles of behavior for the generation which in a few years will take over both routines and societal innovation

History tells us that this face of Education has always been sensitive to emerging technologies

Technologies of communication and information have been particularly influential in new directions of society in particular of education

The transition from orality to writing marked a new role for the teacher

From the sole repository of accumulated knowledge the teacher became a guide and interpreter of registered knowledge

The emergence of hardware in the form of documents and books initiated a companionship between teacher and hardware

It is also remarkable how the emergence of writing strengthened individual memory contrary to the concerns of Thamus when Theuth explained to him the discovery of writing

The conservative king was afraid that the new invention would implant forgetfulness in the souls of men

Mathematics Education in Different Cultural Traditions- A Comparative Study of East Asia and the West

Frederick Koon-Shing Leung, Klaus-D. Graf, Francis J. Lopez-Real, 2006-08-02

The idea of the ICMI Study 13 is outlined as follows

Education in any social environment is influenced in many ways by the traditions of these environments

This study brings together leading experts to research and report on mathematics education in a global context

Mathematics education faces a split phenomenon of difference and correspondence

A study attempting a comparison between mathematics education in different traditions will be helpful to understanding this phenomenon

As a leading role in the global megatrend of scientific innovation China has been creating a more and more open environment for scientific innovation increasing the depth and breadth of

academic cooperation and building a community of innovation that benefits all. These endeavors have made new contributions to globalization and creating a community of shared future. To adapt to this changing world and China's fast development in this new area, the 2nd International Conference on Internet Education and Information Technology IEIT 2022 is to be held in April 15-17, 2022. This conference takes bringing together global wisdom in scientific innovation to promote high quality development as the theme and focuses on research fields including information technology, education, big data, and Internet. This conference aims to expand channels of international academic exchange in science and technology, build a sharing platform of academic resources, promote scientific innovation on the global scale, improve academic cooperation between China and the outside world. It also aims to encourage exchange of information on research frontiers in different fields, connect the most advanced academic resources in China and abroad, turn research results into industrial solutions, bring together talents, technologies, and capital to boost development.
