Vector Optimization Guang-ya Chen, Xuexiang Huang, Xiaogi Yang, 2005-11-20 Vector optimization model has found many important applications in decision making problems such as those in economics theory management science and engineering design since the introduction of the Pareto optimal solution in 1896 Typical examples of vector optimization model include maximization minimization of the objective pairs time cost benefit cost and mean variance etc Many practical equilibrium problems can be formulated as variational in equality problems rather than optimization problems unless further assumptions are imposed The vector variational inequality was introduced by Giannessi 1980 Extensive research on its relations with vector optimization the existence of a solution and duality theory has been pursued The fundamental idea of the Ekeland's variational principle is to assign an optimization problem a slightly perturbed one having a unique solution which is at the same time an approximate solution of the original problem This principle has been an important tool for nonlinear analysis and optimization theory Along with the development of vector optimization and set valued optimization the vector variational principle introduced by Nemeth 1980 has been an interesting topic in the last decade Fan Ky's minimax theorems and minimax inequalities for real valued functions have played a key role in optimization theory game theory and mathematical economics An extension to vector payoffs was introduced by Blackwell 1955

Variational Analysis and Set Optimization Akhtar A. Khan, Elisabeth Köbis, Christiane Tammer,2019-06-07

This book contains the latest advances in variational analysis and set vector optimization including uncertain optimization optimal control and bilevel optimization Recent developments concerning scalarization techniques necessary and sufficient optimality conditions and duality statements are given New numerical methods for efficiently solving set optimization problems are provided Moreover applications in economics finance and risk theory are discussed Summary The objective of this book is to present advances in different areas of variational analysis and set optimization especially uncertain optimization optimal control and bilevel optimization Uncertain optimization problems will be approached from both a stochastic as well as a robust point of view This leads to different interpretations of the solutions which widens the choices for a decision maker given his preferences Recent developments regarding linear and nonlinear scalarization techniques with solid and nonsolid

ordering cones for solving set optimization problems are discussed in this book. These results are useful for deriving optimality conditions for set and vector optimization problems. Consequently necessary and sufficient optimality conditions are presented within this book both in terms of scalarization as well as generalized derivatives. Moreover an overview of existing duality statements and new duality assertions is given. The book also addresses the field of variable domination structures in vector and set optimization. Including variable ordering cones is especially important in applications such as medical image registration with uncertainties. This book covers a wide range of applications of set optimization. These range from finance investment insurance control theory economics to risk theory. As uncertain multi objective optimization especially robust approaches lead to set optimization one main focus of this book is uncertain optimization. Important recent developments concerning numerical methods for solving set optimization problems sufficiently fast are main features of this book. These are illustrated by various examples as well as easy to follow steps in order to facilitate the decision process for users. Simple techniques aimed at practitioners working in the fields of mathematical programming finance and portfolio selection are presented. These will help in the decision making process as well as give an overview of nondominated solutions to choose from.
