Thinking and Reasoning: A Very Short Introduction Jonathan St B. T. Evans, 2017-09-21 Our extraordinary capacity to reason and solve problems sets us aside from other animals but our evolved thinking processes also leave us susceptible to bias and error The study of thinking and reasoning goes back to Aristotle and was one of the first topics to be studied when psychology separated from philosophy In this Very Short Introduction Jonathan Evans explores cognitive psychological approaches to understanding the nature of thinking and reasoning problem solving and decision making He shows how our problem solving capabilities are hugely dependent on also having the imagination to ask the right questions and the ability to see things from a completely new perspective Beginning by considering the approaches of the behaviourists and the Gestalt psychologists he moves on to modern explorations of thinking including

hypothetical thinking conditionals deduction rationality and intuition Covering the role of past learning IQ and cognitive biases Evans also discusses the idea that there may be two different ways of thinking arising from our evolutionary history ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Towards a Theory of Thinking Britt Glatzeder, Vinod Goel, Albrecht Müller, 2010-03-20 What is Thinking Trying to Define an Equally Fascinating and Elusive Phenomenon Human thinking is probably the most complex phenomenon that evolution has come up with until now There exists a broad spectrum of definitions from subs ing almost all processes of cognition to limiting it to language based sometimes even only to formalizable reasoning processes We work with a medium sized definition according to which thinking encompasses all operations by which cog tive agents link mental content in order to gain new insights or perspectives Mental content is thus a prerequisite for and the substrate on which thinking operations are executed The largely unconscious acts of perceptual object stabilization ca gorization emotional evaluation and retrieving all the above from memory inscriptions are the processes by which mental content is generated and are therefore seen as prerequisites for thinking operations In terms of a differentia specifica the notion of thinking is seen as narrower than the notion of cognition and as wider than the notion of reasoning Thinking is thus seen as a subset of cognition processes and reasoning processes are seen as a subset of thinking Besides reasoning the notion of thinking includes also nonexplicit intuitive and associative processes of linking mental content According to this definition thinking is not dependant on language i e also many animals and certainly all mammals show early forms of thinking

Thinking as a Science Henry Hazlitt,1916 LARGE PRINT EDITION More at LargePrintLiberty com It s incredible that

this 1916 tutorial on how to think by none other than Henry Hazlitt would still hold up after all these years But here s why Hazlitt was largely self educated He read voraciously He trained himself to be a great intellect In the middle of this process he discovered that it is far more important to learn to think clearly than to merely take in information The result was this book In some ways it is a course in logic But more than that it is a training manual for how to fire up and manage one s mental energy He discusses how to think about analogies and discover their errors He speaks of the error of too much aggregation and misplaced definitions He presents the rules for the interplay between theory and example He shows how to spot errors in theory and experiments He shows how to think all the way to the end of a problem He gives some very practical advice on the relationship between thinking and reading and how to plan that reading so that one uses one s time well His examples of how to think and how not to think are lucid and compelling His influences in this little book include Stanley Jevons and Herbert Spencer so we can see here that Hazlitt was already steeped in economic literature when he wrote this book in 1916 It remains an excellent primer in how to gain and make use of a good education
