systems and the World Wide Web have flooded us with a tremendous amount of data. This explosive growth has generated an even more urgent need for new techniques and automated tools that can help us transform this data into useful information and knowledge. Like the first edition, voted the most popular data mining book by KD Nuggets readers, this book explores concepts and techniques for the discovery of patterns hidden in large data sets, focusing on issues relating to their feasibility, usefulness, effectiveness, and scalability. However, since the publication of the first edition, great progress has been made in the development of new data mining methods, systems, and applications. This new edition substantially enhances the first edition, and new chapters have been added to address recent developments on mining complex types of data, including stream data, sequence data, graph structured data, social network data, and multi-relational data. A comprehensive practical look at the concepts and techniques you need to know to get the most out of real business data. Updates that incorporate input from readers, changes in the field, and more material on statistics and machine learning. Dozens of algorithms and implementation examples, all in easily understood pseudo code, and suitable for use in real world large scale data mining projects. Filtering the Web to Feed Data Warehouses Witold Abramowicz, Pawel J. Kalczynski, Krzysztof Węcel, 2002-07-24

Information is a key factor in business today and data warehousing has become a major activity in the development and management of information systems to support the proper flow of information Unfortunately the majority of information systems are based on structured information stored in organizational databases which means that the company is isolated from the business environment by concentrating on their internal data sources only It is therefore vital that organizations take advantage of external business information which can be retrieved from Internet services and mechanically organized within the existing information structures Such a continuously extending integrated collection of documents and data could facilitate decision making processes in the organization Filtering the Web to Feed Data Warehouses discusses areas such as how to use data warehouse for filtering Web content how to retrieve relevant information from diverse sources on the Web how to handle the time aspect how to mechanically establish links among data warehouse structures and documents filtered from external sources how to use collected information to increase corporate knowledge and gives a comprehensive example illustrating the idea of supplying data warehouses with relevant information filtered from the Web
