*Windows* Joakim Karlsson,2001      *Toward Energy-Efficient Buildings* Vivien Lin Lu,Xi Chen,Jianheng Chen,Kai Jiao,2025-02-17 *Towards Energy Efficient Buildings Envelope Technologies and Sustainable Energy Systems* examines the intersection of building design and energy systems analysis paving the way to sustainable efficient buildings and our communal energy future This book begins by outlining the major energy challenges for buildings and the fundamentals and opportunities in envelope technology for their increasing the efficiency of their energy systems Close analysis of various technologies is then carried out including case studies and demonstrations of impact assessment techniques The ways in which these technologies interact with energy systems within the building are drawn out and clarified for a range of readers Finally detailed guidance on energy system assessment and analysis is provided Bringing together these two essential disciplines for sustainable living *Towards Energy Efficient Buildings* will support energy engineers researchers and students of energy systems in developing technologies for energy efficient sustainable buildings Breaks down the fundamentals of building envelope design for an energy engineer readership Includes a variety of case studies and practical technologies with clear real world impacts on building energy systems and management Leads the reader through comprehensive assessment methodologies to analysis energy system outcomes and enable sustainable cities for the future      *Proceedings of 2024 International Conference on Energy Engineering* Lin Vivien Lu,2025-05-29 The International Conference on Energy Engineering 2024 is dedicated into the forefront of energy innovation Explore groundbreaking research across seven key tracks including Renewable Energy Clean Energy Technologies Intelligent and Electrical Energy Systems Energy Efficiency Energy Storage Energy Policy and Sustainability and Mitigation Technologies Discover cutting edge solutions and strategies to propel sustainable energy production enhance system efficiency and address pressing environmental challenges This comprehensive resource caters to researchers industry professionals policymakers and stakeholders invested in shaping the future of energy technology and policy      *Energy Research Abstracts* ,1988      **Energy-Efficient Timber-Glass Houses** Vesna Žegarac Leskovar,Miroslav Premrov,2013-09-30 The book discusses combining timber and glass two eco materials with a view to developing an optimal contemporary energy efficient house with an attractive design Furthermore the book connects an architectural design approach with structural research to show the possibilities of stabilizing the building with an increased size of the glazing Research results where the glazing is considered as a load bearing structural element are therefore presented in a manner leading to the development of an optimal model of the timber glass house considering both the structural and energy related aspects The presented research work can be useful to designers and future experts in their planning of optimal energy efficient timber buildings The study is based on using timber and glass which were previously neglected as construction materials With suitable technological development and appropriate use they are nowadays becoming essential construction materials as far as energy efficiency is concerned However their combined use is extremely

complicated from both the constructional point of view as well as from that of energy efficiency and sets multiple traps for designers. A good knowledge of their advantages and drawbacks is thus vitally important, which is shown in the present monograph. Energy efficient timber glass houses were selected by the Slovenian National Research Agency as an extraordinary scientific achievement in the field of technical sciences: civil engineering for the year 2013. *Urban Sustainability and Energy Management of Cities for Improved Health and Well-Being* González-Lezcano, Roberto Alonso, 2022-04-29. Global environmental challenges such as climate change, rapid urbanization, and human influence on the environment continue to grow. Many of these resulting risks lead to diseases and negative impacts on health and quality of life. It is now essential to develop more sustainable and healthy environments with greater focus on prevention by targeting the root causes of disease. Urban communities comprise a high concentration of services, consumption, and waste and represent an unsustainable pattern of urbanization that accelerates the decline of global ecosystems, services rather than supporting them through the compensatory contributions of peri-urban and rural areas. By focusing on reducing environmental and social risk factors, almost a quarter of the global burden of disease can be avoided through better health promotion strategies and improved prevention and hygiene measures. *Urban Sustainability and Energy Management of Cities for Improved Health and Well-Being* highlights the interdisciplinary connections between the environment and human health, focusing on new ideas and suggestions for promoting both sustainable development and human health and well-being. It creates a new approach to the analysis of human impacts on the natural environment and conversely determines how the environment can modulate human lifestyles and health. Furthermore, this book explores opportunities and challenges urban communities face as they seek to become sustainable systems embedded in their diverse and complex social and environmental contexts. Covering topics such as affordable housing, ecological waste materials, and urban health, this premier reference source is an essential resource for environmentalists, civil engineers, government officials, architects, libraries, students, and educators of higher education, urban planners, researchers, and academicians. **The Engineering Index Annual**, 1994. Since its creation in 1884, Engineering Index has covered virtually every major engineering innovation from around the world. It serves as the historical record of virtually every major engineering innovation of the 20th century. Recent content is a vital resource for current awareness, new production, information, technological forecasting, and competitive intelligence. The world's most comprehensive interdisciplinary engineering database, Engineering Index, contains over 10.7 million records. Each year, over 500,000 new abstracts are added from over 5,000 scholarly journals, trade magazines, and conference proceedings. Coverage spans over 175 engineering disciplines from over 80 countries. Updated weekly. *Proceedings of the ... National Passive Solar Conference*, 1978. *Thermal and Optical Properties of Low-e Storm Windows and Panels* Thomas Culp, Sarah Widder, Katherine Cort, 2015. Installing low-emissivity low-E storm windows and panels over existing windows has been identified as a cost-effective new approach for improving the energy efficiency of

existing buildings where window replacement is impractical or too expensive As such it is desirable to characterize the key energy performance properties of low E storm windows and panels when installed over different types of existing primary windows this paper presents the representative U factors solar heat gain coefficients SGHCs and visible transmittance properties of the combined assemblies of various storm windows and panel types installed over different primary windows
