Tariq Aftab,2022-04-19 Medicinal plants supply the ever growing needs of humankind for natural chemicals such as pharmaceuticals nutraceuticals agrochemicals and chemical additives These plants contain bioactive secondary metabolites which possess antimalarial anthelmintic anti inflammatory analgesic antimicrobial antiarthritic antioxidant antidiabetic antihypertensive anticancer antifungal antispasmodic cardioprotective antithyroid and antihistaminic properties Secondary metabolites play a major role in the adaptation of plants to the changing environment and stress condition as they are affected by both biotic and abiotic stress Humans rely on medicinal plants for various needs since ancient time and their population still seems enough for fulfilling our demands However in the foreseeable future we will be forced to think about the accessibility of resources for future generations For these reasons we must look for alternative sustainable options of resources which can protect these immensely important medicinal plants from various stresses induced by challenging environment Evolving eco friendly methodologies and mechanisms to improve these plants responses to unfavorable environmental circumstances is important in creating significant tools for better understanding of plant adaptations to various abiotic stresses and sustaining the supply of pharmaceuticals as global climate change intensifies One of the great challenges in the near future will be the sustainable production of medicinal plants under increasing adverse effects of climate change A combination of adverse demographic factors and climatological perturbations is expected to impact food and pharmaceutical production globally Despite the induction of several tolerance mechanisms medicinal plants often fail to survive under environmental extremes To ensure their sustainable production under adverse conditions multidisciplinary approaches are needed and useful leads are likely to emerge However improving plants performance under restrictive

growth conditions requires a deep understanding of the molecular processes that underlie their extraordinary physiological plasticity This edited volume emphasizes the recent updates about the current research on medicinal plants covering different aspects related to challenges and opportunities in the concerned field This book is an attempt to bring together global researchers who have been engaged in the area of stress signaling crosstalk and mechanisms of medicinal plants The book will provide a direction towards implementation of programs and practices that will enable sustainable production of medicinal plants resilient to challenging environmental conditions Moreover this book will instigate and commence readers to state of the art developments and trends in this field

**Plant Microbes Symbiosis: Applied Facets** Naveen Kumar Arora,2014-10-30 Plants form mutualistic association with various microorganisms particularly in the rhizosphere region The association benefits both the partners in a number of ways A single plant can support the growth of diverse microbes and in reciprocation these microbes help the plant in several ways A great deal of knowledge is now available on the mechanisms of action of plant growth promoting microbes in forming

association with their partner plant and benefitting it. With ever increasing population and to achieve food security it has become utmost necessary to utilize these friendly microbes to enhance the crop yield and quality in an ecofriendly and sustainable manner. We already know about the huge negative impact of chemicals used in agriculture on the humans and the ecosystems as a whole. Plant Microbes Symbiosis Applied Facets provides a comprehensive knowledge on practical functional and purposeful utility of plant microbe interactions. The book reviews the utilization of beneficial microbes for crop yield enhancement and protection against diseases caused by phytopathogens and nutrient deficiencies. The tome also reviews the utility of plant growth promoting microbes in helping the plants to deal with abiotic stresses imposed by climate change and anthropogenic activities. The book showcases how plant microbe interactions are or can be utilized for reclamation of stressed soils and degradation of pollutants in a most effective and environment friendly manner. It also ascertains the reasons for the below par performance of the microbial based inoculants. The utilization of biotechnological tools for development of next generation bioformulations to combat the new challenges and overcome past hurdles has been discussed. This wonderful association between plants and microbes if used properly will not only enhance the crop yields and reclaim barren lands but also make our planet a better place to live on for all of its inhabitants.
