Eco-friendly Products for Sustainable Environment Development Dr. Devidas N. Patil ,Dr. Rakesh R. Jadhav ,Dr. Apurba Saikia ,Mr. Chandan Das ,2022-09-26 Every other day we read new about a fossil recently found that shows us the traces of our ancestors We being humans and creatures of this world have always left traces of us behind But traces of this and previous century are not what we should leave for our future generations Because this plastic waste these holes in ozone will endanger the lives of people and there will be extremely bad consequences Nonrenewable energy sources are causing pollution around the world and are adding to entropy Plastic will not degrade for coming thousands of years and we are basically synthesizing things that is beyond natures ability to decompose easily All this calls for production of material that does the job and is not harmful for our environment During the old times there were no shopping bags People used to carry cloth bags in old days now paper bags are their environment friendly replacement which is not very great idea either since we are cutting down trees for that This book was written keeping in mind all the troubles caused by using products that are harmful for environment and progress of this world toward creating eco friendly products was discussed The idea of creating the products that will protect the environment and make it a better place for current and upcoming generations One of the main problems of using chemical dyes to color the clothes has made its way towards utilizing the dyes that are natural or digital alternatives Tanneries are popular for releasing chemicals and metals that are toxic for other living things and we do not even realize how much plastic waste our single shopping trip produces Fuels produced from renewable sources plastic bag alternatives and some environmentally friendly items help people save money Energy saving appliances minimize energy and utility costs while using fewer natural resources Currently most businesses prefer employing eco friendly resources to make items rather than conventional ones in order to protect the environment In addition to the fact that global warming has gotten worse since the turn of the century many businesses have started producing eco friendly goods When choosing to manufacture items some businesspeople find it quite challenging to create a sustainable atmosphere Because the business will be under pressure to develop new technologies to produce a product that is both dependable and environmentally friendly This book will give you a ride of the replacements of products harmful for environment and how their better alternatives are helping the environment get back on track

Eco-Innovation and Green Productivity for Sustainable Production and Consumption, 2nd edition Munir Ahmad,Cem Işık ,Zeeshan Fareed,2025-09-12 With the graduation of time the desire for enhanced production and consumption scales motivated the global economies to opt for the race to the bottom approach leading to environmental unsustainability On the one hand economies focused on escalated production levels proliferating non renewable energy consumption and reducing energy productivity leading to production based carbon dioxide CO2 emissions On the other hand international trade of high CO2 emissions embedded goods has skyrocketed the consumption based CO2 emissions Since production and consumption based CO2 emissions challenge environmental

sustainability there is an urgent need to pursue sustainable production and consumption to realize the United Nations Sustainable Development Goals (SDGs) dream. In this regard, eco-innovation came into play to transition the conventional production setup to a cleaner production mode. Eco-innovation involves all types of technological advancements extending contributions to the SDGs. In this regard, climate technologies and environmental technologies involving renewable energy (e.g., wind, solar, biogas), energy-efficient technologies (e.g., energy-efficient electric appliances), and environmental pollution reduction technologies (e.g., carbon scrubbing filters, water purifiers, waste mitigation technologies) play a tremendous role in mitigating climatic adversities and environmental unsustainabilities. By contributing to the responsible use of natural capital, eco-innovation facilitates efficient energy utilization, improving energy productivity as well as environmental sustainability. Moreover, eco-innovation has the inherent potential to aggravate sustainable production modes through green productivity, a tool to enhance industrial outputs with fewer harms to the environment. As a progressive move, green productivity growth promotes a new trend of producing more economic output by consuming fewer resources and safeguarding ecosystems. The mainstream empirical literature substantiated that eco-innovation and green productivity remained critical players in limiting CO₂ emissions and promoting environmental sustainability. Literature also witnessed that eco-innovation ameliorated energy productivity by motivating the countries to adopt cost-saving and environmentally friendly technologies. On the contrary, the rebound effect supported the environmental deterioration impact of such technologies. Against this backdrop, this Research Topic will provide an opportunity to further delve into the influencing mechanisms triggered by eco-innovation and green productivity growth on energy productivity and environmental sustainability for a futuristic perspective of sustainable production and consumption. This Research Topic welcomes theoretical and empirical original research articles and reviews. Research themes and areas include but are not limited to the following: Links between eco-innovation, green productivity growth, and energy productivity for sustainable production; Climate technologies and carbon neutrality applications for sustainable production; Firm-level environment-related innovation practices; Renewable and energy-efficient industrial transition for sustainable production; Eco-innovation through the firm life cycle for sustainable production and consumption; Green innovation-driven business models for sustainable production; Climate technology-driven policies for sustainable production and consumption; Eco-innovation and zero-emissions agenda implementation.
