Targeting The Computer Government Support And International Competition:

Targeting the Computer Kenneth Flamm, 2012-01-01 Most industrial nations actively support research and development of advanced computer technology They usually justify public expenditures on the basis of both economic and national security benefits This heavy government involvement and the international nature of the computer industry have created increasing challenges to accepted principles of international trade and investment In this detailed analysis of the origins and evolution of government support for computer technology in the United States Western Europe and Japan Kenneth Flamm compares the amounts these countries have invested and how they have organized public and private funding over the past thirty five years He challenges popular myths about the size and effectiveness of government programs to support computer technology and argues that the data suggest a high social rate of return on those investments Flamm concludes that the United States must reevaluate its policies on research and development The role of military programs as the primary vehicle for computer technology development should be de emphasized in favor of support for joint pre competitive industrial research Cooperative research ventures linking universities and industry also ought to be encouraged Since global markets are vital to American computer firms Flamm argues that policies to promote orderly international trade and investment in high technology products are needed to avoid an expanding spiral of protectionism Global Competitiveness of the U. S. Computer Software and Service Industries DIANE Publishing Company, 1995-10 Assesses the global competitiveness of the U S computer software and service industries through an examination of distinct market segments Examines external factors such as government policies intellectual property protection telecommunications regulations and export controls and education trends Internal factors are also examined such as host management strategies and product development strategies that impact these industries The analysis focuses primarily on the U S Europe and Japan Charts tables and graphs **USITC Publication** , 1993 Global Competitiveness of U.S. Advanced-technology Industries United States International Trade Commission, 1993 *Creating the Computer* Kenneth Flamm, 2010-12-01 The development of the first electronic digital computers in the 1940s signaled the beginning of a new and distinctive type of industry an industry marked by competition through innovation and by the large percentage of revenues spent on research and development Written as a companion volume to *Targeting the Computer Government Support and International Competition* this comprehensive volume provides a new understanding to the complex forces that have shaped the computer industry during the past four decades Kenneth Flamm identifies the origins of technologies important to the creation of computers and traces the roots of individual technologies to the specific research groups and programs responsible for major advances He evaluates the impact of these innovations on industrial competition and argues that the emergence of specialization and product differentiation in the 1950s and the compatibility and standards in the mid 1960s were key factors defining this competition Flamm also identifies the various market strategies adopted in later decades to challenge an industry leader strategies linked to the entry and exit

of individual firms In addition to the effects of technology and internal industry developments international competition and national policies on technology trade and investment shaped the evolution of this new industry Flamm documents the role of government support for technology in the United States Western Europe and Japan and describes the critical technological and economic links between national and international markets Finally he links these strategies technological trends and national policies to one another and shows how they continue to influence current developments in the computer industry
