

PSYCHOLOGY

THE BASIC PRINCIPLES OF PSYCHOLOGY FOR INTRODUCTORY COURSES

INTRODUCTION

• **DEFINITION:** Scientific study of behavior and mental processes and how they are affected by an organism's physical and mental state and external environment

• **GOALS:** Describe, understand, predict and control (or modify) behavior or mental processes

• **PSYCHOLOGY AS A SCIENCE:**

1. **Descriptive studies** - describe but not explain

a. **Case history** - description of one individual

b. **Observation**

i. **Naturalistic** - natural environment

ii. **Laboratory** - setting controlled by researcher

c. **Surveys** - questionnaires and interviews

d. **Tests**

i. **Reliability** - used to measure whether individual differences in test scores are due to actual differences in the characteristics being measured or due to chance errors and fluctuations.

ii. **Validity** - refers to the extent to which a test measures what it purports. The validity of a test must be empirically established - relating the test to particular criterion that it claims to measure.

2. **Correlational Studies** - strength of relationships between variables, does not show causation

3. **Experiment** - researcher controls variable(s) to discover its effect on other variables

a. **Independent variable** - manipulated/controlled by researcher

b. **Dependent variable** - measured by researcher (data)

c. **Experimental and control groups** - only experimental group exposed to independent variable, otherwise treated the same

d. **Change in dependent variable caused by independent variable**, since all else remained the same

e. **Confounding Variable** - an observed effect that may be due to an intervening third variable between the dependent and independent variables. The confounding variable must be systematically controlled or, if possible, eliminated, otherwise obtained results are invalid.

f. **Inferred Variable** - a non-observable variable that is inferred as the mediator between two observed events. For instance, inferring the experience of "fear" from certain measurable physiological anxiety responses. It is frequently difficult to avoid circular explanations in positing an inferred variable.

g. **Subject Variable** - a condition that is part of the subject's make-up and cannot be assigned randomly; e.g., sex, height, hair-color etc. Because of their non-randomizability, causal conclusions cannot be derived from subject variable experiments.

h. **Non-Subject Variable** - a characteristic that is not part of a subject's make-up, and thus can be randomly assigned; e.g., whether the subject received a certain drug or a placebo.

LEARNING

Change in behavior as a result of experience

• **CLASSICAL CONDITIONING**

1. **Pavlov's studies**

a. **Unconditioned stimulus (UCS)** - food - elicits an unconditioned response (UCR) - salivation

b. **Pair neutral stimulus** - tone - with UCS - food

c. **Neutral stimulus becomes conditioned stimulus (CS)** - tone - which elicits conditioned response CR - salivation

2. **Principles of classical conditioning**

a. **Extinction** - when the CS is not presented with the UCS, it will diminish

b. **Stimulus generalization** - similar stimuli may elicit the same response as the CS

LEARNING CONTINUED

c. **Stimulus discrimination** - different responses are made to stimuli which are similar to the CS

• **OPERANT CONDITIONING**

1. **Reinforcer (reward)** - increases response probability

a. **Positive reinforcement** - response followed by presentation of reinforcing stimulus

b. **Negative reinforcement** - response followed by removal of aversive stimulus

2. **Punishment** - stimulus that follows response decreases probability response will occur

3. **Principles of Operant Conditioning**

a. **Extinction** - response no longer reinforced

b. **Stimulus generalization** - response will occur to similar stimuli

c. **Stimulus discrimination** - responses do not occur to different stimuli

d. **Timing of reinforcers** - the sooner a reinforcer or punisher follows an action, the greater its effect

e. **Schedules of reinforcement**

i. **Continuous reinforcement** - a particular response is always reinforced

ii. **Intermittent reinforcement** - reinforcing only some responses

(a) **Fixed ratio (FR)** - reinforcement after a fixed number of responses, high rates of responding

(b) **Fixed interval (FI)** - reinforcement after fixed amount of time, reduced rates

(c) **Variable interval (VI)** - reinforcement after a variable amount of time, low steady rate of response

f. **Shaping** - reinforce successive approximations to the desired response

g. **Chaining** - a method of connecting responses into a sequence of behaviors. At the end of the chain there must always be a reinforcer. The chain is constructed by beginning at the end and working backward; all behaviors have to be previously conditioned into the organism's responses.

4. **Cognitive Behavior Modification**

The principles of learning theory are applied to alter undesirable thoughts, rather than only observable behaviors.

a. **Social Learning Theory** - (**Bandura**) four processes which influence learning are:

i. Attention

ii. Memory

iii. Behavior

iv. Motivation

b. **Specific cognitive processes that are recognized:**

i. Attribution

ii. Expectancy

iii. Logical

iv. Verbal

v. Imaginative

c. **Rational emotive therapy** - (**Ellis**) considers the central cause of dysfunctional behavior to be due to irrational beliefs. The therapy focuses on the alteration of these irrational beliefs.

d. **Problem-solving therapy** - focuses on enhancing the patient's ability to make decisions and solve problems in stressful or difficult situations.

e. **Paradoxical intervention** - patients are instructed to purposely perform undesirable symptomatic behaviors on command in an effort to demonstrate their ability to gain control over these behaviors.

f. **Attribution therapy** - attempts to facilitate the patient's ability to re-attribue undesirable feelings and symptoms to something less threatening and more acceptable.
