This volume, originally published in 1988, makes a substantial contribution to the understanding of mineral exploration and the major economic, political, and geologic forces that govern it. Some chapters examine the behaviour and performance of particular participants in the exploration process, while others focus on specific countries. This is a valuable title for any student interested in environmental studies and the global impact of economics.

World mineral exploration : trends and economic issues ; a project of "Resources for the Future" and The Colorado School of Mines in coop. with The Internat. Inst. for Applied Systems Analysis John E. Tilton, 1988 Essentials of Mineral Exploration and Evaluation S. M. Gandhi, B. C. Sarkar, 2016-05-10 Essentials of Mineral Exploration and Evaluation offers a thorough overview of methods used in mineral exploration, campaigns, evaluation, reporting, and economic assessment processes. Metallic Mineral Exploration Roderick G. Eggert, 2015-09-16 How has exploration for minerals evolved in recent years? Is it as productive an activity as it once was? Why have changes occurred? Roderick G. Eggert explores these and other questions about the complex set of circumstances surrounding metallic mineral exploration. Originally published in 1987, Eggert documents trends in the level and the distribution of expenditures by mining companies for metallic mineral exploration and examines a number of factors that may be responsible for these trends. This significant study serves as a handy introduction to the subject for students interested in environmental studies, natural resources, and economics.

Sustainable Minerals Operations in the Developing World Geological Society of London, 2005 The sustainable development of minerals, which are non-renewable resources, is a major challenge in today's world. In this regard, the true definition of sustainability is a debating point in itself: can such a concept exist with respect to non-renewable resources? Perhaps the ideal sustainability model is one that minimizes negative environmental impact and maximizes benefits to society, the economy, and regional/national development. Developed and near-developed economies rely for commodity supplies on developing countries where major mining operations are often a mainstay of the domestic economy. Limited environmental regulation and low wages lead to charges of exploitation. Also, large numbers of people have no alternative to living by

informal often dangerous artisanal mining This Special Publication gives examples from developing countries from all scales of mineral extraction The volume reviews environmental economic health and social problems and highlights the need to solve these before sustainability can be achieved The better solutions require mutual understanding through full involvement of all stakeholders education training and investment so that small scale and artisanal mines can grow into well managed operations At larger scales most major international mining companies have now improved their practices and are monitoring their progress although there is no room for complacency in this rapidly changing area **World Metal**

Economic Development John E. Tilton,1992 Many low income mineral exporting countries have seen their per capita income decline or their standards of living stagnate over the last several decades Is it possible contrary to natural expectations that domestic mineral wealth actually retards development and growth Lectures by leading scholars identify factors that lie behind the negative performance and offer specific policy guidance to help make mineral wealth an engine for economic development **Proceedings of Exploration '87** Ontario.
