Hermans, Frans Meijers, 2020-06-09

The Pursuit of Happiness Between Prosperity and Adversity looks at activities practices and experiences that are instrumental in changing one's level of well-being This book focuses on the situations in which well-being is challenged or even decreased and explores guided by Dialogical Self Theory pathways that lead to its elevation Research has suggested that there are three main determinants of well-being genetic factors one's individual's history and happiness relevant activities The third and most promising means of altering one's happiness level are activities and practices that require some degree of effort A surprising finding is that these personal efforts may have a happiness boosting potential that is almost as large as the probable role of genetics and apparently larger than the influence of one's individual history Efforts are invested in fields of tension between prosperity and adversity The Pursuit of Happiness covers a variety of topics such as finding happiness and well-being in the face of extreme adversity the role of honesty in genuine happiness the promise of minimalistic life orientations the value of inner silence evaluating our lives from a future perspective and the relationship between happiness career development counselling and psychotherapy This book was originally published as a special issue of the British Journal of Guidance Counselling **absence of clutter** Paul Stephens, 2020-03-24 An exploration of minimal writing texts generally shorter than a sentence as complex powerful literary and visual works In the 1960s and 70s minimal and conceptual artists stripped language down to its most basic components the word and the letter Barbara Kruger Jenny Holzer Carl Andre Lawrence Weiner and others built lucrative careers from text-based art Meanwhile poets and writers created works of minimal writing visual texts generally shorter than a sentence One poem by Aram Saroyan reads in its entirety eyeeye In absence of clutter Paul Stephens offers the first comprehensive account of minimal writing arguing that it is equal in complexity and power to better known more commercial text-based art Minimal writing Stephens writes can be beguilingly simple on the surface but can also offer iterative reading experiences on multiple levels from the fleeting to the ponderous absence of clutter for example the entire text of a poem by Robert Grenier is both expressive and self-descriptive

Stephens first sets out a theoretical framework for reading and viewing minimal writing and then offers close readings of works of minimal writing by Saroyan Grenier Norman Pritchard Natalie Czech and others He reverse engineers recent works by Jen Bervin Craig Dworkin and Christian B k that draw on molecular biology and explores print on demand books by Holly Melgard code poetry by Nick Montfort Twitter based work by Allison Parrish and the use of Instagram by Hans Ulrich Obrist and Saroyan Text it seems is becoming ever more prevalent in visual art meanwhile poems are getting shorter When reading has become scanning a screen and writing tapping out a text absence of clutter invites us to reflect on how we read see and pay attention

Synthetic Biology Huimin Zhao,2013-03-21 Synthetic Biology provides a framework to examine key enabling components in the emerging area of synthetic biology Chapters contributed by leaders in the field address tools and methodologies developed for engineering biological systems at many levels including molecular pathway network whole cell and multi cell levels The book highlights exciting practical applications of synthetic biology such as microbial production of biofuels and drugs artificial cells synthetic viruses and artificial photosynthesis The roles of computers and computational design are discussed as well as future prospects in the field including cell free synthetic biology and engineering synthetic ecosystems Synthetic biology is the design and construction of new biological entities such as enzymes genetic circuits and cells or the redesign of existing biological systems It builds on the advances in molecular cell and systems biology and seeks to transform biology in the same way that synthesis transformed chemistry and integrated circuit design transformed computing The element that distinguishes synthetic biology from traditional molecular and cellular biology is the focus on the design and construction of core components that can be modeled understood and tuned to meet specific performance criteria and the assembly of these smaller parts and devices into larger integrated systems that solve specific biotechnology problems Includes contributions from leaders in the field presents examples of ambitious synthetic biology efforts including creation of artificial cells from scratch cell free synthesis of chemicals fuels and proteins engineering of artificial photosynthesis for biofuels production and creation of unnatural living organisms Describes the latest state of the art tools developed for low cost synthesis of ever increasing sizes of DNA and efficient modification of proteins pathways and genomes Highlights key technologies for analyzing biological systems at the genomic proteomic and metabolomic levels which are especially valuable in pathway whole cell and multi cell applications Details mathematical modeling tools and computational tools which can dramatically increase the speed of the design process as well as reduce the cost of development
