Voting Green:

The Greens in British Politics James Dennison, 2016-11-18 This book explains how the Greens went from obscurity to England's third largest party in just one year quadrupling their vote share and securing their place in Britain's refigured party system on the way. Sophisticated quantitative analyses of the Greens voters and members as well as interviews with all of the leading party insiders are used to explain how internal dynamics, changing political opportunities and a forgotten portion of the electorate resulted in an unprecedented Green Surge that defied decades of British party membership decline and a lack of historic far left electoral success in the UK. Not only does James Dennison untangle a fascinating political case study but he also shines a light on how technological, attitudinal and demographic changes are reshaping politics and forcing us to question many of our previous assumptions about political parties and how voters choose.

Green Politics Wolfgang Rüdiger, 1992

Environmental Publics Sally Eden, 2016-12-08 How do ordinary people think about the environment as they go about their daily lives? Does thinking about the environment make them do things differently? This book is the first to explore the idea of environmental publics that is the ways in which ordinary people engage with environmental issues across different practical contexts of work, play and home. Emphasising the practices of environmental engagement, *Environmental Publics* examines how people consume the environment, learn about it, campaign for its protection and enjoy it through their leisure time. But the book avoids relying on idealisations of consumers or citizens or theoretical constructs about behavioural norms that have traditionally dominated research in this field. Instead, this book differentiates environmental publics not by who they are but by what they are doing in their daily practices. It also analyses specifically the geographies of those practices: how what people do affects the environment but in different ways across time and space and at different scales; aspects of practices that are neglected in the literature. With an interdisciplinary perspective, this book will be of interest to students and scholars in geography, sociology, science and technology studies, political science and anthropology. It is written in an accessible and readable style so as to be useful for preliminary and more advanced courses in environmental management, perception and policy as well as in studies of modern society, consumption and environmentalism.
