your darlings David Didau will question your most deeply held assumptions about teaching and learning expose them to the fiery eye of reason and see if they can still walk in a straight line after the experience It seems reasonable to suggest that only if a theory or approach can withstand the fiercest scrutiny should it be encouraged in classrooms David makes no apologies for this why wouldn't you be sceptical of what you're told and what you think you know As educated professionals we ought to strive to assemble a more accurate informed or at least considered understanding of the world around us Here David shares with you some tools to help you question your assumptions and assist you in picking through what you believe He will stew findings from the shiny white laboratories of cognitive psychology stir in a generous dash of classroom research and serve up a side order of experience and observation Whether you spit it out or lap it up matters not If you come out the other end having vigorously and violently disagreed with him you'll at least have had to think hard about what you believe The book draws on research from the field of cognitive science to expertly analyse some of the unexamined meta-beliefs in education In Part 1 Why we're wrong David dismantles what we think we know examining cognitive traps and biases assumptions gut feelings and the problem of evidence Part 2 delves deeper Through the threshold looking at progress liminality and threshold concepts the science of learning and the difference between novices and experts In Part 3 David asks us the question What could we do differently and offers some considered insights into spacing and interleaving the testing effect the generation effect reducing feedback and why difficult is desirable While Part 4 challenges us to consider What else might we be getting wrong cogitating formative assessment lesson observation grit and growth differentiation praise motivation and creativity
