Hybrid Dynamical Systems Hai Lin, Panos J. Antsaklis, 2021-11-18 A graduate level textbook Hybrid Dynamical Systems provides an accessible and comprehensive introduction to the theory of hybrid systems It emphasizes results that are central to a good understanding of the importance and role of such systems The authors have developed the materials in this book while teaching courses on hybrid systems cyber physical systems and formal methods This textbook helps students to become familiar with both the major approaches coloring the study of hybrid dynamical systems The computer science and control systems points of view emphasizing discrete dynamics and real time and continuous dynamics with switching respectively are each covered in detail The book shows how the behavior of a system with tightly coupled cyber discrete and physical continuous elements can best be understood by a model simultaneously encompassing all the dynamics and their interconnections The theory presented is of fundamental importance in a wide range of emerging fields from next generation transportation systems to smart manufacturing Features of the text include extensive use of examples to illustrate the main concepts and to provide insights additional to those acquired from the main text chapter summaries enabling students to assess their progress end of chapter exercises which test learning as a course proceeds an instructor s guide showing how different parts of the book can be exploited for different course requirements and a solutions manual freely available for download by instructors adopting the book for their teaching Access to MATLAB and Stateflow is not required but would be beneficial especially for exercises in which simulations are a key tool

Machine Learning and Knowledge Discovery for Engineering Systems Health Management Ashok N. Srivastava, Jiawei Han, 2011-11-16

Machine Learning and Knowledge Discovery for Engineering Systems Health Management presents state of the art tools and techniques for automatically detecting diagnosing and predicting the effects of adverse events in an engineered system With contributions from many top authorities on the subject this volume is the first to bring together the two areas of machine learning and systems health management Divided into three parts the book explains how the fundamental algorithms and methods of both physics based and data driven approaches effectively address systems health management The first part of the text describes data driven methods for anomaly detection diagnosis and prognosis of massive data streams and associated performance metrics It also illustrates the analysis of text reports using novel machine learning approaches that help detect and discriminate between failure modes The second part focuses on physics based methods for diagnostics and prognostics exploring how these methods adapt to observed data It covers physics based data driven and hybrid approaches

to studying damage propagation and prognostics in composite materials and solid rocket motors The third part discusses the use of machine learning and physics based approaches in distributed data centers aircraft engines and embedded real time software systems Reflecting the interdisciplinary nature of the field this book shows how various machine learning and knowledge discovery techniques are used in the analysis of complex engineering systems It emphasizes the importance of these techniques in managing the intricate interactions within and between the systems to maintain a high degree of reliability
