Kucher,2007   *Identifying Product and Process State Drivers in Manufacturing Systems Using Supervised Machine Learning* Thorsten Wuest,2015-04-20 The book reports on a novel approach for holistically identifying the relevant state drivers of complex multi stage manufacturing systems This approach is able to utilize complex diverse and high dimensional data sets which often occur in manufacturing applications and to integrate the important process intra and interrelations The approach has been evaluated using three scenarios from different manufacturing domains aviation chemical and semiconductor The results which are reported in detail in this book confirmed that it is possible to incorporate implicit process intra and interrelations on both a process and programme level by applying SVM based feature ranking In practice this method can be used to identify the most important process

parameters and state characteristics the so called state drivers of a manufacturing system Given the increasing availability of data and information this selection support can be directly utilized in e g quality monitoring and advanced process control Importantly the method is neither limited to specific products manufacturing processes or systems nor by specific quality concepts   Regularized Nonparametric Logistic Regression and Kernel Regularization Fan Lu,2006   **Chinese Journal of Electronics** ,2008   *Mathematical Reviews* ,2008   **Measuring Technology and Mechatronics Automation IV** Zhi Xiang Hou,2011-10-24 Selected peer reviewed papers from the Fourth International Conference on Measuring Technology and Mechatronics Automation ICMTMA 2012 January 6 7 2012 Sanya China   *Machine Learning with SVM and Other Kernel Methods* K.P. Soman,R. LOGANATHAN,V. AJAY,2009-02-02 Support vector machines SVMs represent a breakthrough in the theory of learning systems It is a new generation of learning algorithms based on recent advances in statistical learning theory Designed for the undergraduate students of computer science and engineering this book provides a comprehensive introduction to the state of the art algorithm and techniques in this field It covers most of the well known algorithms supplemented with code and data One Class Multiclass and hierarchical SVMs are included which will help the students to solve any pattern classification problems with ease and that too in Excel KEY FEATURES Extensive coverage of Lagrangian duality and iterative methods for optimization Separate chapters on kernel based spectral clustering text mining and other applications in computational linguistics and speech processing A chapter on latest sequential minimization algorithms and its modifications to do online learning Step by step method of solving the SVM based classification problem in Excel Kernel versions of PCA CCA and ICA The CD accompanying the book includes animations on solving SVM training problem in Microsoft EXCEL and by using SVMLight software In addition Matlab codes are given for all the formulations of SVM along with the data sets mentioned in the exercise section of each chapter   **Advances in Neural Networks--ISNN ...** ,2005
