Lazarus,1966 The techniques of habit termed behavior therapy have been adopted by a constantly increasing number of psychotherapists but the gathering of information about them by both students and practitioners is still a matter of some difficulty The authors have accordingly prepared this book to serve as a source of instruction on the practical approach to the neurotic patient as an organism whose habits of reaction are completely determined by his constitution and by the impact of his environment upon him and on the treatment of neuroses by the techniques that have been based on principles of conditioning learning The book shows that therapy is conducted with a general understanding of the patient s reactions and problems and that he frequently has to be disabused of moralistic notions and other unnecessary sources of anxiety before conditioning procedures can be successfully carried out A matter that has hitherto been given scarcely any attention is the tremendous extent of the difference of attitude between behavior therapists and dynamically oriented therapists The characterization of this difference of attitude and instruction for its development and use in therapy are among the most important features of the book **Doubleday Papers in Psychology** ,1954 *British Universities' Guide to Graduate Study* ,1993 **Casework Papers Presented at the Annual Forum** National Conference on Social Welfare,National Conference of Social Work (U.S.),1955
