Understanding Virtual Design Studios:

Understanding Virtual Design Studios Mary L. Maher, Simeon J. Simoff, Anna Cicognani, 2012-12-06 The idea of a Virtual Design Studio VDS has been around for many years In the early days establishing a way of transferring documents by file transfer was enough to establish a virtual design studio Our expectations are greater now Along with document transfer we expect to be able to work with others at a distance as if they were in the same physical room We have seen how email video conferences and shared whiteboards can provide environments in which we can do many of the things we are used to doing face to face The internet has changed the way we communicate at a personal level and now affects the way we work professionally Along with the new technology and the initial excitement we have also experienced frustration when our expectations are beyond the capability for the technology to deliver This frustration is due to the relative immaturity of software solutions to collaboration and also due to the lack of software support for designing We cannot just take a set of tools off the shelf and create a virtual design studio We first need to understand what is possible in a virtual design studio and then understand what the technology can provide At a more fundamental level we need to understand the differences between working in the physical presence of our collaborators and using technology to allow us to communicate at a distance

Investigation of Design Studio Culture In a Virtual Design Studio Jessica Briskin,2018 A collective case study Stake 1995 methodology was used to investigate a virtual design studio The purpose of this study was to explore how two case studies used a virtual design studio VDS environment for studio practices and the cultural practices of giving a critique in an online studio This approach involved a blend of empirical educational research of studio based learning and cultural model theory This study was designed to investigate a VDS and to develop an

understanding of the culture that arises specifically the pedagogical beliefs and practices used to support critiques in a virtual studio environment The study involved 17 participants in two digital design courses at a higher education institution Data analytics on user participation a thematic analysis of interviews and a content analysis of student artwork were used to find patterns in the data This study was guided by the following questions 1 What were the patterns of participation and engagement in studio based critique practices 2 How did the virtual studio create opportunities or barriers to studio based practices and or culture 3 How do students collectively construct a critique and utilize this process to improve their artifacts The findings suggest that the VDS was effective in allowing students to participate and conduct critiques but the dialogue which was largely one directional involved only a small number of students As a result of this limited participation the dialogue did not foster as high a level of collaboration and continuous dialogue as hoped Future research in VDSs should consider a design that promotes student engagement and continuous discourse beyond the critique requirements
