    Conference on the Unified Computation Laboratory Institute of Mathematics and Its Applications,University of Stirling. Department of Computing Science and Mathematics. Systems and Software Engineering Subgroup,1990   **The Unified Computation Laboratory** Charles Rattray,Robert George Clark,1992 This book is concerned with the theory and techniques required in the construction and implementation of complex software systems Improved understanding may come from developing suitable models and theories of such systems to guide appropriate experimentation Alternatively standard mathematical theories and constructions may provide techniques directly usable in the design and implementation of new software In any case the use of these approaches involves the development of new tools and using them leads to further insights which can improve the original theories and models The contributors to this book cover all these many aspects involved in the origin development and refinement of software systems Some chapters break new ground some represent the next stage in ongoing research programs and others describe the next generation of software tools In addition to a readership of software engineers and computer scientists the book offers a source of interesting research problems for mathematicians whose work is vital for the continued development of the field   **The Unified Computation Laboratory** University of Stirling,1990   **Conference on the Unified Computation Laboratory** Conference on The Unified Computation Laboratory,1990   **Theories And Experiences For Real-time System Development** Charles Rattray,Teodor Rus,1995-02-14 Our understanding of real time systems is rapidly approaching a level of maturity which calls for a consolidation of our present knowledge and experience Particularly effective in influencing our understanding has been the conjoining of universal algebra with the theory and practice of real time system development This interplay between algebraic methodology and software technology AMAST for real time systems is the theme for this text Each chapter derived from papers presented at the all invitation 1st AMAST International Workshop on Real Time Systems Iowa 1993 is written by leaders in their field The chapters form an intriguing mix of modeling specification verification and implementation of real real time systems They cover untimed and timed systems sequential concurrent and embedded real time processes integrated models using state machines temporal logic and algebraic data models real time CSP verification tools system design using temporal logic symbolic checking of discrete time models iterative symbolic approximation in timing verification and verification of audio protocols timed full LOTOS and timed LOTOS extensions LOTOS specification of telephone services and flight warning computers and performance analysis   <u>Recent Trends in Data Type Specification</u> Michel Bidoit,Christine Choppy,1993-01-29 The algebraic specification of abstract data types has been a flourishing research topic in computer science since 1974 The main goal of this work isto evolve theoretical foundations and a methodology to support the design and formal development of reliable software This volume gives the proceedings of the Eighth Workshop on Specification of Abstract Data Types held jointly with the Third COMPASS workshop near Paris in August 1991 The main topics covered by

the joint workshop are specification languagesand program development algebraic specification of concurrency theorem proving object oriented specifications order sorted algebras abstract implementation and behavioral semantics The volume contains four invited surveys and twelve contributed papers all of which underwent a careful refereeing process **Grid Technologies** M. P. Bekakos,George A. Gravvanis,Hamid Arabnia,2006 Grid computing denotes an approach to utilize distributed resources that are not subject to centralized control This approach fulfils computing requirements arising within the context of current high performance computing applications especially in the field of computational science and engineering This idea is analogous to an electric power network grid where power generators are distributed but the users are able to access electric power without bothering about the source of energy and its location Current grid enabling technologies consist of stand alone architectures A typical architecture provides middleware access to various services at different hierarchical levels Computational grids enable the sharing selection and aggregation of a wide variety of geographically distributed computational resources such as supercomputers clusters of computers storage systems data sources instruments people etc and present them as a single unified resource for solving large scale computations and data intensive computing applications e g molecular modeling for drug design brain activity analysis high energy physics etc Grid computing is a new emerging research area aiming to promote the development and advancement of technologies that provide seamless and scalable access to wide area distributed resources *Z User Workshop, Cambridge 1994* J.P. Bowen,J.A. Hall,2012-12-06 This volume contains papers from the Eighth Z User Meeting to be held at the University of Cambridge from 29 30 June 1994 The papers cover a wide range of issues associated with Z and formal methods with particular reference to practical application These issues include education standards tool support and interaction with other design paradigms such as consideration of real time and object oriented approaches to development Among the actual topics covered are the formal specification in Z of Defence Standard 00 56 formal specification of telephone features specifying and interpreting class hierarchies in Z and software quality assurance using the SAZ method Z User Workshop Cambridge 1994 provides an important overview of current research into industrial applications of Z and will provide invaluable reading for researchers postgraduate students and also potential industrial users of Z **Computer Aided Verification** Kim G. Larsen,1992-04-22 This volume contains the proceedings of the third International Workshop on Computer Aided Verification CAV 91 held in Aalborg Denmark July 1 4 1991 The objective of this series of workshops is to bring together researchers and practitioners interested in the development and use of methods tools and theories for automatic verification of finite state systems The workshop provides a unique opportunity for comparing the numerous verification methods and associated verification tools and the extent to which they may be utilized in application design The emphasis is not only on new research results but also on the application of existing results to real verification problems The papers in the volume areorganized into sections on equivalence checking model checking applications tools for process algebras the state explosion problem

symbolic model checking verification and transformation techniques higher order logic partial order approaches hardware verification timed specification and verification and automata   *ZUM '95: The Z Formal Specification Notation* Jonathan P. Bowen,1995-08-23 This book presents the proceedings of the 9th International Conference of Z Users ZUM 95 held in Limerick Ireland in September 1995 The book contains 34 carefully selected papers on Z using Z applications of Z proof testing industrial usage object orientation animation of specification method integration and teaching formal methods Of particular interest is the inclusion of an annotated Z bibliography listing 544 entries While focussing on Z by far the most commonly used formal method both in industry and application the volume is of high relevance for the whole formal methods community   **Proceedings** ,2001   **Aerospace Vehicle Dynamics and Control** M. V. Cook,Michael J. Rycroft,1994 Rapid developments of computer technology have affected the analysis synthesis and control of every aspect of aerospace vehicle dynamics The rewards of increased research have had far reaching implications in terms of performance safety and operational cost effectiveness New challengeshave emerged in the wake of the recent shift in emphasis from military to civil applications This collection of papers covers a wide range of topics including mathematical modelling compuational methods computer simulation and developments in control systems To sum up this is an interesting and topical selection of papers on recent research in an area of growing interest and application   *Image Processing* Jonathan M. Blackledge,1997 The generation storage and processing of digital images plays a fundamental role in the information technology revolution Digital imaging processing technology has developed markedly over the last ten years and more and more information is being conveyed through the display and analysis of digital images The way in which image data is stored and processed is fundamental to all aspects of IT Examples include remote sensing using the new generation of digital satellites which carry a range of different sensors that when coupled with suitable image processing technology can provide a wealth of information to geologists geographers and atmospheric physicists used in everything from the exploration of oil and other natural resources to environmental monitoring and agricultural development in the Third World Other examples include the use of image processing in medical imaging for use in diagnosis using conventional X ray Computed Tomography to research into the behaviour of the human brain using real time Magnetic Resonance Imaging This book consists of twenty one papers which collectively cover a broad range of image processing problems and the way on which solutions to these problems are used in different area of sciences and technology The papers present details of the way in which computers of varying processing power can be programmed to store image efficiently resolve features and patterns in an image that are either time consuming or impossible for human interpreters and develop machines that can see like humans The book covers a wide range of applications which include the use of lasers for studying the dynamic behaviour of mechanical components overviews of image processing in remote sensing and medical imaging and the application of a new form of geometry fractal geometry for rcognizing patterns which is not possible with conventional data processing The book will be of value to any
