Toolbox D20 System:

Playing with Power Michelle Nephew, 2003-05-01 This study examines roleplaying games RPGs as both a literary and cultural phenomenon in which the text's producers take the role of an authorial multiplicity ABSTRACT Authorship has undergone drastic revision in the twentieth century A fundamental transformation in literature wherein the author has become a multiplicity of voices is evinced by the development of roleplaying games as both literary and cultural texts The literary roots of roleplaying games are self evident as they draw on writers such as H P Lovecraft and J R R Tolkien However a consequence of the development of the roleplaying game has been a subsequent departure from these authorial beginnings roleplaying games have irrevocably transformed the role of the writers who inspired them altering the authorial position to become a border blurring multiplicity Not only do roleplaying game designers reinterpret literary texts as literary games often borrowing rules material from other designers in the process in modifying the function of the author from a single creative entity to an empowered storytelling among groups roleplaying games further complicate previous distinctions between author and audience Players create a fictional world as a group endeavor authoring a complex structure of fantasy that addresses Freudian concepts of dreams and wish fulfillment In this way roleplaying becomes a locus for issues of identity including questions of performance spectatorship and gender construction And by allowing play in regard to identity roleplaying games are able to transgressively navigate expressions of difference encouraging players to subtly work against the traditional split between spectacle and narrative The thriving fan subculture surrounding roleplaying only emphasizes the transgressiveness of the hobby this is a social formation that aggressively utilizes new technology such as the internet through which fans are able to explore culturally subversive methods of authoring in the face of hostility from the surrounding cultural environment They too are active producers and manipulators of meanings rather than passively accepting dominant ideology By fusing the broader perspectives of literary and cultural criticism with personal experiences this study examines the development of roleplaying games from the fiction of individual writers to the interactive roleplaying based on them wherein fiction writers the hobby's creators designers editors publishers fans players and the cultural environment are all invested with the creative power to contribute meaningfully to the narrative

Engineering Modeling Languages Benoit Combemale, Robert France, Jean-Marc Jézéquel, Bernhard Rumpe, James Steel, Didier Vojtisek, 2016-11-17 Written by foremost experts in the field *Engineering Modeling Languages* provides end to end coverage of the engineering of modeling languages to turn domain knowledge into tools The book provides a definition of different kinds of modeling languages their instrumentation with tools such as editors interpreters and generators the integration of multiple modeling languages to achieve a system view and the validation of both models and tools Industrial case studies across a range of application domains are included to attest to the benefits offered by the different techniques The book also includes a variety of simple worked examples that introduce the techniques to the novice user The book is structured in two main parts The

first part is organized around a flow that introduces readers to Model Driven Engineering MDE concepts and technologies in a pragmatic manner It starts with definitions of modeling and MDE and then moves into a deeper discussion of how to express the knowledge of particular domains using modeling languages to ease the development of systems in the domains The second part of the book presents examples of applications of the model driven approach to different types of software systems In addition to illustrating the unification power of models in different software domains this part demonstrates applicability from different starting points language business knowledge standard etc and focuses on different software engineering activities such as Requirement Engineering Analysis Design Implementation and V V Each chapter concludes with a small set of exercises to help the reader reflect on what was learned or to dig further into the examples Many examples of models and code snippets are presented throughout the book and a supplemental website features all of the models and programs and their associated tooling discussed in the book

Decision Making for Complex Socio-Technical Systems Thomas Flüeler, 2006-03-08 Waste management can be considered as a mirror of society In its our fluctuating definition besides conserving a supply of valuable materials and resources it acts as a fascinating expression for our throw away mentality Waste is inevitable but it nevertheless provides an opportunity a need and an incentive for society to pursue a more careful management of it If this is successfully carried out society may well find it possible to manage itself in an overall more careful and universal way The management or governance of radioactive waste particularly is determined by a complex constellation of individuals social aggregates and institutions A wealth of interconnected parts forms a complex and volatile system that is highly technical and explosively political in nature The problems inherent in this system must be managed so as to reach a safe acceptable responsible feasible and sustainable solution It is a system with an objective long term dimension with a hazard potential of in part hundreds of thousands of years and it has a long term institutional dimension insofar as its implementation must last for decades The very notion of risk extends from the long life of radionuclides over the perception of dread to the decisional risk of whether when and how to implement an agreed upon solution

Contemporary Linear Systems Using MATLAB Robert D. Strum, Donald E. Kirk, 1994 This is a title in the PWS series BookWare Companion Series It is a set of correlated self contained courseware modules covering fundamental concepts in engineering and applied mathematics Students work through example problems electronically and are encouraged to experiment with problems and data in an electronic lab setting Each BookWare Companion features a software script for the electronic examples based on a popular applications software package for the IBM PC or the Macintosh and a printed volume containing computer based exploration exercises and a variety of learning aids and hints The text bolstered by illustrative examples 200 problems and MATLAB exploration exercises on the accompanying data disk should enable students to work with linear systems problems in a virtual laboratory at the computer changing problem values at will in a what if fashion
