Abstract

In the Republic of Moldova, the viticulture industry is a sector with a high economic impact, and the utilization of secondary products from winemaking represents a growing concern regarding environmental sustainability. Wine lees, one of the types of wine waste, is less studied in order to valorize it. Currently it is used in the production of ethyl alcohol, as aggregates in the soil and others. The aim of this study was to characterize from a physico-chemical and microbiological point of view the lees sediments obtained after the primary fermentation of three types of individualized red wines made from autochthonous grapes varieties. It was found that residual yeasts represent a valuable raw material containing carbohydrates (from $14.35\% \pm 0.19\%$ to $25.11\% \pm 1.51\%$ SU), lipids (from $4.61\% \pm 0.21\%$ to $9.41\% \pm 2.04\%$ SU), proteins (from $42.62\% \pm 1.57\%$ to $77.62\% \pm 9.14\%$ SU), anthocyanins (from 9.18 ± 0.15 to 22.78 ± 1.60 mg cyanid) and beta-glucans (from $12.84\% \pm 0.01\%$ to $17.42\% \pm 0.02\%$). The pH value of wine lees ranges from 3.49 ± 0.0 to 3.083 ± 0.01 , the dry matter from $9.62\% \pm 0.22\%$ to $25.06\% \pm 0.42\%$ and the ash from $0.03\% \pm 0.42\%$ to $0.035\% \pm 0.21\%$. The microbiological study confirmed the presence of live yeasts of the genus *Saccharomyces cerevisiae*, which remain active due to the presence of residual sugars and oxygen. The results of the research are promising and encourage the obtaining of new products with special purpose and added value.

Science and Belief in the Natural Wine Movement Pablo Alonso González, Eva Parga Dans, 2025-06-28 Natural wine is a

captivating and rapidly evolving phenomenon in the world of viticulture and winemaking. This movement, characterized by minimal intervention, low or no chemical additives, and a focus on terroir-driven expressions of grapes, has ignited a passionate following among wine enthusiasts, sommeliers, and eco-conscious consumers. It's more than just a beverage; it embodies a philosophy that aligns with contemporary sustainability and wellness trends. Though natural wine enthusiasts have produced ample coverage of the natural wine movement in books, essays, and films, academics have lagged behind in their examination of this global phenomenon. In *Uncorked: Negotiating Science and Belief in the Natural Wine Movement*, scholarly discussion reaches across disciplines to offer valuable insights for researchers, producers, wine enthusiasts, and anyone with an interest in this movement. Exploring the relevance of natural wine offers a unique lens through which to examine the intersection of tradition, innovation, environmental stewardship, and the evolving tastes of modern consumers. Through the stories of the winemakers, the science behind natural fermentation, and the cultural and historical context, this book aims to provide a comprehensive look at how this movement is shaping the future of wine and our relationship with the natural world. Each essay from a thought leader in their respective field delves deep into the historical, ecological, and sociocultural dimensions of natural winemaking, shedding light on its ancient roots, ecological practices, and the philosophical underpinnings that drive the movement. Discussions of regulatory and consumer aspects will also elucidate the practical considerations of making and selling natural wine. *Uncorked: Negotiating Science and Belief in the Natural Wine Movement* is a groundbreaking edited book that offers a comprehensive and scholarly exploration of the world of natural wine. This interdisciplinary volume brings together leading experts in fields ranging from enology and sensory studies to anthropology and philosophy, creating a rich tapestry of insights into the production, consumption, and cultural significance of natural wine. Academics, winemakers, and wine enthusiasts alike will be illuminated by this volume.

[Uncorking the Physics of Wine](#) Lutz Kasper, Patrik Vogt, 2024-06-26. A still-sealed wine bottle, a corkscrew, and a smartphone are undoubtedly a promising combination. Notify good friends with one device and extract the cork from the bottle with the other: what more could one want? Perhaps, in addition to quenching the thirst, the mind also craves satisfaction. With this book, you practice your physics mindfulness during the enjoyment of wine; you learn how to determine the speed of sound with the characteristic pop sound when opening the bottle; how to properly decant wine; what peculiarities red wine shows in laser light; and what Pythagoras has to do with wine. *Uncorking the Physics of Wine* creates the wonderful connection between science and wine. An inspiring non-fiction book with experiments to participate in and replicate or simply to savor. The authors, Lutz Kasper, studied physics and mathematics at the University of Hannover to become a teacher and completed his doctorate in physics education at the University of Potsdam.
