Xview Programming Manual for Xview Version 3:

XView Reference Manual for XView Version 3 Thomas Van Raalte, 1991 *XView Programming Manual* Dan Heller, Thomas Van Raalte, 1991 The XView Programming Manual has been revised and expanded for XView Version 3.2 XView was developed by Sun Microsystems and is derived from Sun's proprietary programming toolkit SunView. It is an easy to use object oriented toolkit that provides an OPEN LOOK user interface for X applications. The major additions for XView Version 3 are Internationalization support for XView programs. A new drag and drop package that lets the user transfer data between applications by dragging an interface object to a region. A mouseless input model that means XView applications can be controlled from the keyboard without a mouse. Soft function keys are also supported. The Notices package has been completely rewritten to incorporate Notice objects. The Selection package has been rewritten replacing the SunView style selection service. New panel items such as multiline text items and drop target items have been included. The Panels chapter has been reworked to clarify and simplify panel usage. XView 3.2 includes bug fixes in the software and the documentation but does not add significant new functionality. The Attribute Summary from the previous edition of the XView Programming Manual has been expanded and is now published as a companion volume the XView Reference Manual. It contains alphabetical listings of XView attributes, functions and macros as well as other reference information essential for XView programmers.
