The BERA/SAGE Handbook of Educational Research Dominic Wyse, Neil Selwyn, Emma Smith, Larry E.

Suter, 2016-12-15 Education has continued to grow in stature and significance as an academic discipline. In addition to world renowned research studies, the growth of education has been seen in the methodology and methods underpinning its research. The BERA SAGE Handbook of Educational Research provides a cutting edge account of the research and methodology that is creating new understandings for education research policy and practice. Over two volumes, the handbook addresses educational research in six essential components: Section 1 Understanding Research, Section 2 Planning Research, Section 3 Approaches to Research, Section 4 Acquiring Data, Section 5 Analysing Data, Section 6 Reporting, Disseminating and Evaluating Research. Featuring contributions from more than 50 of the biggest names in the international field, the BERA SAGE Handbook of Educational Research represents a very significant contribution to the development of education. Clegg, 1992-05-07 **Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives** Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics: multiple cognitive processes are shared between reading and mathematics, including the representation and retrieval of symbolic information, attention, working memory, and cognitive control. Additionally, multiple brain networks are involved in both math and reading, and last common genetic factors might influence both reading and math. Hence, it comes as no surprise that there are meaningful associations between aspects of math and reading abilities. Moreover, comorbidity rates between math learning disabilities (MD) and reading disabilities (RD) are high, up to 66%, and the prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities. Accordingly, the goal of the research topic is to explore the underlying mechanisms of this overlap between reading and math. The research topic aims to include the following topics: Genetics: it has been found that both RD and MD are based on genetic factors and run in families. Moreover, math problem solving shares significant genetic overlap with general cognitive ability and reading decoding, whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability. Hence, this topic will explore the shared and unique genetic risk factors for RD and MD. In addition to shared and unique genetic influence on reading and math, Neural perspective: converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus (IPS) as a core region that involves quantity manipulation. However, several additional brain areas, such as frontoparietal and temporoparietal areas, were found to be involved in numerical tasks. Individuals with MD show deficits in a distributed set of brain regions that include the IPS, fusiform gyrus in posterior brain regions, and prefrontal cortex regions. Similarly, converging evidence indicates that the left hemisphere regions centered in the fusiform gyrus, temporoparietal cortex, and pre

frontal cortex regions are strongly involved in typical reading and present lower activity connectivity or abnormal structure in RD. Thus there is a meaningful neural overlap between reading and math. Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and atypical development. Cognitive factors that play a role in mathematics and reading and comorbidity between RD and MD. There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not. Multiple cognitive processes are shared between reading and mathematics. Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions. Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts. Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and their transfer effect on improving mathematical processing. Alternatively it will be good to test whether math interventions will improve reading.

The most widely acclaimed reference series in education and psychology the Mental Measurements Yearbooks are designed to assist professionals in selecting and using standardized tests. The series initiated in 1938 provides factual information, critical reviews and comprehensive bibliographic references on the construction, use and validity of all tests published in English. The objectives of the Mental Measurements Yearbooks have remained essentially the same since the publication of the series. These objectives include provision to test users of factual information on all known tests published as separates in the English speaking countries of the world, candidly critical test reviews written for the MMY series by qualified professional people representing a variety of viewpoints, unique publication of each volume in the MMY series with new volumes supplementing rather than supplanting previous series volumes. Each yearbook is a unique publication supplementing rather than supplanting the previous volumes.
