

Critical Thinking Paper

Critical thinking and decision making are more related than people know. Critical thinking affects the way people think, the way people live, and the decision they make. Good decision making is the backbone of sound management. This paper will analyze the three different types of thinking styles. Also, this paper will provide you with critical thinking and decision making processes by discussing workplace examples that highlight each of the three different types of thinking.

The three different types of thinking are scientific, creative, and persuasive. After reading this paper learning more about critical thinking and decision making you will then have a better understanding of their relationship. This paper should provide you with the benefits of both critical thinking and decision making both personally and professionally. **Persuasive Thinking** Persuasive thinking is the thought process that is trying to influence someone to accept a message . This type of thinking is extremely too difficult to master, but when done well can be very effective.

The main points to consider when using this type of thinking an individual must understand; human nature, emotions, and think carefully before attempting to get someone to accept a message. An individual must also be aware of the time and the place the message is being communicated, and understands his or her involvement in the message it's self. Most important, the message being conveyed must be understood, the audience, and the audiences' values. A thinker that can understand all of these complex pieces of persuasive thinking will be successful at getting the people they are attempting to persuade to accept his or her message.

Scientific Thinking Scientific thinking and the scientific method have been a part of problem solving and communication since before the modern era. The scientific method has four specific steps used in the thinking process. The first is observation, and brainstorming the causes and effects of a certain situation or phenomenon. This is the beginning of thinking. The second step to the scientific method is hypothesis, a tentative statement about the relationship between two variables, usually in the form of a prediction.

The hypothesis is similar to an educated guess that formulates the experiment. Experimentation is the third step of the scientific method. This is necessary to test the hypothesis and determine the correct cause and effect through various types of research. The final step of the scientific method is verification, or the analysis of data to see if that data supports or disputes the hypothesis. if the hypothesis is not supported the communication was incorrect somewhere and needs to be restarted at step one.

According to "VirtualSalt, 2010" Creative Thinking is the ability to imagine or invent something new. Unlike Persuasive thinking, Creative thinking is much easier to master. It is basically taking your own ideas and sh
