Syntaxdirected Semantics Formal Models Based On Tree Transducers:

Syntax-Directed Semantics Zoltan Fülöp, Heiko Vogler, 2012-12-06 The subject of this book is the investigation of tree transducers Tree transducers were introduced in theoretical computer science in order to study the general properties of formal models which give semantics to context free languages in a syntax directed way Such formal models include attribute grammars with synthesized attributes only denotational semantics and attributed grammars with synthesized and inherited attributes However these formal models share certain constituents which are irrelevant in the investigation of the general properties considered in this book In particular we can abstract a from derivation trees of the context free grammar and take trees over some ranked alphabet \mathcal{B} from the semantic domain of the model and use the initial term algebra instead and finally \mathcal{C} from the machine oriented computation paradigm which maintains the incarnation information of recursive function calls and take a term rewriting semantics instead Applying these three abstraction steps to attribute grammars with synthesized attributes only to denotational semantics and to attributed grammars we obtain the concepts of top down tree transducer macro tree transducer and attributed tree transducer respectively The macro attributed tree transducer combines the concepts of the macro tree transducer and the attributed tree transducer This book explores the general properties of these four types of tree transducers

FST TCS 2002: Foundations of Software Technology and Theoretical Computer Science Manindra Agrawal, Anil Seth, 2003-07-01 This volume consists of the proceedings of the 22nd International Conference on the Foundations of Software Technology and Theoretical Computer Science FSTTCS 2002 organized under the auspices of the Indian Association for Research in Computing Science IARCS The

conference was held at the Indian Institute of Technology Kanpur during December 12-14, 2002. The conference attracted 108 submissions of which two were withdrawn. Of these, a total of 26 papers were selected for presentation in the conference. As in the last year, the PC meeting was held electronically, stretching over nearly three weeks in August 2002 and was a great success. In addition to the contributed papers, we have invited speakers this year: Hendrik Lenstra Jr, Harry Mairson, Dale Miller, Chih Hao Luke Ong, and Margus Veenes. We thank them for accepting our invitation and for providing abstracts or even full papers for the proceedings. Two workshops were organized in conjunction with the conference, both in Kanpur. A workshop on Parameterized Complexity was held during December 10-11, organized by Mike Fellows and Venkatesh Raman. The second workshop actually consisted of three miniworkshops: on Coding Theory by Madhu Sudan, on Finite Field Algorithms by Hendrik Lenstra Jr, and on Sieve Theory by R. Balasubramanian. We wish to thank all the reviewers and PC members who contributed greatly to making the conference a success. We also wish to thank the team at Springer Verlag for their help in preparing the proceedings.
