Platonism and Positivism in Psychology Julie Christian, Mortimer Adler, 2018-04-17 Psychology is a field of many paradoxes Since its earliest beginnings as a natural science psychologists have been in search of their proper subject matter Today they are in less agreement than ever In this classic text originally published as *What Man Has Made of Man* Mortimer J Adler goes to the root of the problem He shows that psychology is simultaneously a particular social science and a branch of philosophical knowledge These two parts must be distinguished from yet related to each other if sound philosophical analysis is to replace bad philosophizing which scientific psychologists too often use to describe their research findings Adler also examines the scientific contribution of psychoanalysis by distinguishing it from Freud's meta psychology which he shows to be an inadequate statement of the traditional or classical philosophical positions Adler believes that psychology is crucially important in modern culture It is theoretically important because it is central to the errors of modern philosophy It has practical significance because economic moral and political doctrines are determined by the view that man reviews his own nature To understand the history of modern times and to correct its normative deviations we must according to Adler consider what man has made of man This engaging analytical study will be a valuable tool for psychologists psychoanalysts philosophers and sociologists

Perplexities of Consciousness Eric Schwitzgebel, 2011-01-28 A philosopher argues that we know little about our own inner lives Do you dream in color If you answer Yes how can you be sure Before you recount your vivid memory of a dream featuring all the colors of the rainbow consider that in the 1950s researchers found that most people reported dreaming in black and white In the 1960s when most movies were in color and more people had color television sets the vast majority of reported dreams contained color The most likely explanation for this according to the philosopher Eric Schwitzgebel is not that exposure to black and white media made people misremember their dreams It is that we simply don't know whether or not we dream in color In *Perplexities of Consciousness* Schwitzgebel examines various aspects of inner life dreams mental imagery emotions and other subjective phenomena and argues that we know very little about our stream of conscious experience Drawing broadly from historical and recent philosophy and psychology to examine such topics as visual perspective and the unreliability of introspection Schwitzgebel finds us singularly inept in our judgments about conscious experience *Trusting*
