Systolic Array Parallelizing Compiler:

A Systolic Array Parallelizing Compiler, 1990-08-31 *A Systolic Array Parallelizing Compiler* Ping-Sheng Tseng, 2012-12-06 Widespread use of parallel processing will become a reality only if the process of porting applications to parallel computers can be largely automated Usually it is straightforward for a user to determine how an application can be mapped onto a parallel machine however the actual development of parallel code if done by hand is typically difficult and time consuming Parallelizing compilers which can generate parallel code automatically are therefore a key technology for parallel processing In this book Ping Sheng Tseng describes a parallelizing compiler for systolic arrays called AL Although parallelizing compilers are quite common for shared memory parallel machines the AL compiler is one of the first working parallelizing compilers for distributed memory machines of which systolic arrays are a special case The AL compiler takes advantage of the fine grain and high bandwidth interprocessor communication capabilities in a systolic architecture to generate efficient parallel code xii Foreword While capable of handling an important class of applications AL is not intended to be a general purpose parallelizing compiler *A Systolic Array Optimizing Compiler* Monica S. Lam, 2011-10-17 This book is a revision of my Ph D thesis dissertation submitted to Carnegie Mellon University in 1987 It documents the research and results of the compiler technology developed for the Warp machine Warp is a systolic array built out of custom high performance processors each of which can execute up to 10 million floating point operations per second 10 MFLOPS Under the direction of H T Kung the Warp machine matured from an academic experimental prototype to a commercial product of General Electric The Warp machine demonstrated that the scalable architecture of high performance programmable systolic arrays represents a practical cost effective solution to the present and future computation intensive applications The success of Warp led to the follow on iWarp project a joint project with Intel to develop a single chip 20 MFLOPS processor The availability of the highly integrated iWarp processor will have a significant impact on parallel computing One of the major challenges in the development of Warp was to build an optimizing compiler for the machine First the processors in the xx A Systolic Array Optimizing Compiler array cooperate at a fine granularity of parallelism interaction between processors must be considered in the generation of code for individual processors Second the individual processors themselves derive their performance from a VLIW Very Long Instruction Word instruction set and a high degree of internal pipelining and parallelism The compiler contains optimizations pertaining to the array level of parallelism as well as optimizations for the individual VLIW processors *Parallel Computing and Transputers* D. Arnold, 1994 The broadening of interest in parallel computing and transputers is reflected in this text Topics covered include concurrent programming graphics and image processing and robotics and control It is based on the proceedings of the 6th Australian Transputer and Occam User Group *Opportunities and Constraints of Parallel Computing* Jorge L.C. Sanz, 2012-12-06 At the initiative of the IBM Almaden Research Center and the National Science Foundation a workshop on Opportunities and Constraints of Parallel Computing

was held in San Jose California on December 5 6 1988 The Steering Committee of the workshop consisted of Prof R Karp University of California at Berkeley Prof L Snyder University of Washington at Seattle and Dr J L C Sanz IBM Almaden Research Center This workshop was intended to provide a vehicle for interaction for people in the technical community actively engaged in research on parallel computing One major focus of the workshop was massive parallelism covering theory and models of computing algorithm design and analysis routing architectures and interconnection networks languages and application requirements More conventional issues involving the design and use of parallel computers with a few dozen processors were not addressed at the meeting A driving force behind the realization of this workshop was the need for interaction between theoreticians and practitioners of parallel computation Therefore a group of selected participants from the theory community was invited to attend together with well known colleagues actively involved in parallelism from national laboratories government agencies and industry
