The Collateral Circulation Of The Heart:

Collateral Circulation of the Heart Christian Seiler,2009-06-12 The sober explanation for this book is a call by the Springer Verlag London to edit a publication on The functional relevance of the collateral circulation of the heart Alternatively it could be sold as the result of my intention to reduce entropy of 18 years of scientific work on the topic of the coronary circulation which was itself meant to diminish the amount of useless energy Such a process of reducing disarray in a system with the aim of grasping it better is related to simplification which carries the risk of introducing error This can be exemplified by the historic view of angina pectoris which used to be simplified as being always fatal thus obscuring for nearly two centuries the view of a self healing mechanism such as the collateral circulation of the heart It would be naive to assume the present work to be free of erroneous oversimplification because the very nature of scientific work is related to generating simple hypotheses with their subsequent falsification In that context and bluntly my primary interest in the field of the collateral circulation was not initiated with a vision of eradicating the consequences of coronary artery disease CAD by promoting the growth of natural bypasses The time for such sizeable ideas had passed in the 1970s with the start of the work by Wolfgang Schaper [The Collateral Circulation of the Heart](#) Wolfgang Schaper,1971 **Collateral Circulation**

Wolfgang Schaper,Jutta Schaper,2012-12-06 Collateral blood vessels develop by growth of pre or newly formed structures in almost all vascular provinces as a consequence of progressing stenosis of the main artery These alternative routes of blood supply are potentially able to alter the course of vascular disease Collateral development is a time consuming process and arterial stenosis and occlusion often progress faster than growth of the alternative routes The authors ultimate goal is to provide a better understanding of collateral growth in order to pave the way for improving the conditions for these potentially selfhealing processes These were programmed by nature but have not been perfected probably because defenses against arterial disease had not been put under the pressure of natural selection **Report of the Charity Hospital of Louisiana at New Orleans** Charity Hospital (New Orleans, La.),1877 *Collateral Circulation in Clinical Surgery* John F.
