The Geodetic World Map:

The Geodetic World Map I. I. McRae, 1988-01-01 Based upon the geodetic equivalent theory developed by Sepharial about the turn of the 20th century this is a unique innovative concept to astrology Easily figure the Midheaven Ascendant houses of a location then place your planets in it to determine how you relate to that area Also determine political economic geophysical activity by observing eclipses lunations transits affecting the geodetic angles of any area **The Geodetic World Map** Chris McRae, 1988 **From Here to There** Ed. M Davis, 2008-01-01 This is the long awaited follow up to Astrolocality Astrology in which the author starts with the history of locality astrology telling its story from ancient Babylonia to modern times He then introduces essential works from contemporary astrologers who are utilising locality techniques today This is a brilliant opportunity to learn from notable astrologers like Bernadette Brady Kathryn Cassidy Faye Cossar Donna Cunningham Robert Currey Dennis Flaherty Arielle Guttman A Tad Mann Chris McRae David Meadows Dale O'Brien Angel Thompson and Maya White **The Geographical Journal**, 1930 Includes the Proceedings of the Royal geographical society formerly pub separately Map Projection Transformation Qihe Yang, John Snyder, Waldo Tobler, 2020-11-26 With the advance of science and technology there have been breakthroughs in the field of classical research and methods of map projection Among these computer science and space science have had the greater influence upon the field of research and the formation of a working body of map projection developing them in breadth and depth This book reflects several aspects of the development of modern mathematical cartography especially the theory and methods of map projection transformation Map projection transformation is an area of research in mathematical cartography newly developed over the last 25 years It is widely used in surveying and computer assisted cartography data processing for information systems and the transformation of data from space remote sensing and other space sciences The development of map projection transformation not only expands new areas of research on mathematical cartography but it also further develops the applied area with the creation and application of map projection transformation software and mapping mathematics bases on the computer **Astrolocality Astrology** Martin Davis, 2014-07-10 Welcome to the revised and updated version of Astrolocality Astrology In the 15 years since the original version was published the world has shrunk and computer software has dramatically improved It is now easier than ever to access astro mapping software and so quite literally seek out the best places for holiday work relationships you name it This revised edition includes the fascinating case histories of Edward Snowden and Ronnie Biggs and it is also organised in a more reader friendly format **Tile-Based Geospatial Information Systems** John T. Sample, Elias Ioup, 2010-10-26 Tile based mapping systems have grown to become the dominant form of mapping system with the rise of Web based mapping tools The origin of this book is a desire to collect all our discoveries techniques and best practices for creating a tile mapping system into one combined volume The intent of this text is to provide a comprehensive guide to the theory behind creating a tiled map system as well as a practical guide to

Geodetic Astrology for Relocating and World Affairs Chris McRae,2016-04-22 Geodetic astrology literally means World astrology The Geodetic Equivalent concept was originally a house cusp structure calculated for any geographic location and a natal chart inserted within it can be used for personal relocation in order to emphasise or alleviate specific points on that chart The chart of an eclipse lunation or Great Conjunction can also be inserted within its cusp structure for mundane astrology observing angular emphasis in forecasting The concept has now been advanced to place the zodiac across a map of the world for a quick glance at where a planet s position or even an eclipse degree would have its greatest influence pinpointing global hot spots for a notable event It could indicate the escalation of political activity and societal tension predict the potential of an earthquake or a volcanic eruption or indicate extreme weather conditions due to shifts in ocean currents This book is a fascinating compilation of the author s countless years of study in the application of both mundane astrology and personal relocation It can be understood by any level of astrological student due to the many examples stories and explanatory text and will no doubt provide inspiration for further research
