L. H. Blumgart

The Hepatobiliary System:

The Hepatobiliary System W. Taylor, 2013-06-29 A volume on the biliary system appeared in 1965 based on a symposium of the NATO Advanced Institute held in September 1963 in Newcastle upon Tyne in England It soon became an authoritative text on the problems of the biliary tract and for instance the discussion on the biliary secretion of organic anions organic cations and inorganic ions were classic references The worn pages of the volume in many libraries including my own bespeak its usefulness over ten long years The initiative and energy of the Director of the first Institute have to be admired even more so since he was able to assemble a Second Institute in Aalborg Denmark in 1975 His wisdom is reflected in the selection of the subjects discussed The comparison between the two volumes tells something about the advancement in the time interval in knowledge about liver and biliary tract diseases about the turnover of researchers interested in the liver and its diseases and also about the present philosophy in biologic science For this comparison this volume is particularly suited because in contrast to many other recent conferences the more leisurely pace of the NATO Institutes permits more comprehensive but still scholarly reviews of the problems The foreword of the first volume written by my colleague the late Harry Sobotka expresses his now dated astonishment about the progress of knowledge of biology of the bile so much less accessible to study than urine

The Biliary System David Q.-H. Wang, Brent A. Neuschwander-Tetri, Piero Portincasa, 2016-12-15 The liver is a vital organ involved in numerous metabolic processes such as cholesterol and bile acid metabolism biliary lipid secretion and bile formation Cholesterol balance across the liver has a crucial effect on influencing plasma total and LDL cholesterol levels and biliary cholesterol concentrations Cholesterol and bile acid biosyntheses are primarily modulated by negative feedback regulatory mechanisms through the sterol regulatory element binding protein isoform 2 SREBP 2 and the farnesoid X receptor FXR pathways respectively The conversion of cholesterol to bile acids in the liver can balance the fecal excretion of bile acids which is an important route for the removal of cholesterol from the body Bile formation begins in the bile canaliculi and maintenance of the enterohepatic circulation of bile acids results in a continuous secretion of bile Hepatic secretion of biliary lipids is determined mainly by a group of ATP binding cassette ABC transporters that are located on the canalicular membrane of hepatocytes which are regulated by various nuclear receptors Bile acids promote bile flow by their osmotic effects Also they are essential for the intestinal absorption of cholesterol fatty acids and fat soluble vitamins and play an important role in aiding the digestion of dietary fat Bile acids function as signaling molecules and anti inflammatory agents to regulate lipid glucose and energy metabolism by rapidly activating nuclear receptors and cell signaling pathways This eBook summarizes the progress in the molecular and cellular mechanisms of cholesterol and bile acid metabolism and the physical chemistry of biliary lipids with emphasis on biliary lipid metabolism that is regulated by nuclear receptors in the hepatobiliary system

The Biliary System David Q.-H. Wang, 2012-03-12 The exponential expansion of knowledge in the field of hepatobiliary diseases makes systematic revisions of current concepts almost mandatory nowadays This eBook
