Tidal Dynamics Fergus J. Wood, 2001      Current Trends in Estuarine and Coastal Dynamics Xiao Hua Wang, Lulu Qiao, 2024-08-17 Recent Trends in Estuarine and Coastal Dynamics Observations and Modelling is a thorough reference guide on the most recent trends and developments in observing and modelling of estuaries and coastal oceans The coasts cover a diverse range of ecosystems within marine estuarine and freshwater environments They are some of the most heavily populated and visited areas and are also some of the most threatened natural habitats Human activities like sewage discharge overfishing navigation channel dredging land reclamation the construction of shipping ports and marine plastics are also responsible for coastal pollution and degradation This book focuses on current studies on sediment transport dynamics and hydrodynamics of these environments and presents thorough case studies that aim to help students and researchers working in the field Includes worldwide contributions from experts in the field of ocean modelling and coastal management Contains real life case studies to guide students and researchers Covers the latest studies on recent developments in observing and modelling estuaries and coastal oceans      *Tidal Hydrodynamics* Bruce B. Parker, 1991-09-03 Consists of refereed papers by the world's leading authorities on tidal hydrodynamics Its forty four papers including nine review papers cover all aspects of the subject and present for the first time in one place state of the art treatments of recent advances including tidal detection from satellite altimetry global tide modeling nonlinear tidal interactions and internal tidal phenomena      **Tidal Dynamics : Coastal Flooding and Cycles of Gravitational Force** Fergus J. Wood, 1986-02-03 Rev expanded ed of The strategic role of perigean spring tides in nautical history and North American coastal flooding 1635 1976 1978      Sediment Cascades Tim Burt, R. J. Allison, 2010-01-07 Sediment Cascades An Integrated Approach provides a comprehensive overview that addresses the transport of sediment through the landscape Suitable for academic researchers industry practitioners research students and advanced level undergraduates seeking detailed knowledge and an up to date review of the recent research literature The emphasis is on contemporary sediment system dynamics with relevance both to landscape management and landform development Sediment Cascades An Integrated Approach begins with an explanation of the need for an integrated approach to sediment delivery systems and introduces the main themes of sediment production delivery storage and transfer Further chapters then focus on specific environments from mountains through floodplains to estuaries and the continental shelf Focuses on contemporary sediment system dynamics and current research Covers a sequence of environments from steep mountains to the continental shelf Highlights the continuity of the subject by linking each component area with its adjacent elements      **Salt Intrusion, Tides and Mixing in Multi-Channel Estuaries** Anh Duc Nguyen, 2008-11-01 Multi channel estuaries such as the Mekong Delta in Vietnam and the Scheldt in the Netherlands have characteristics of both the river and the sea forming an environment influenced by tidal movements of the sea and freshwater flow of the river This study discusses a predictive analytical approach for salinity intrusion and discharge estimate

in multi channel estuaries The new approach agrees with 1 D hydrodynamic models and observations indicating its applicability in practice It has successfully developed a new theory and a new equation to quantify tidal pumping due to ebb flood channel residual circulation and the related salt dispersion

**Tidal Dynamics: Theory and analysis of tidal forces** Fergus J. Wood,2001

**Dynamic Response of Coasts and Estuaries to Human Impacts** Xiao Hua Wang,2024-07-25

The coasts cover a diverse range of ecosystems within marine estuarine and freshwater environments They are some of the most heavily populated and visited areas and are also some of the most threatened natural habitats Coastal zones are critically important not only to the people who live there but for the health of the planet Many world estuaries and coast environments are under tremendous stress in response to global warming and the increased anthropogenic forcing Warmer waters rising sea levels tropical cyclones storm surges and flooding and coastal erosion are just some of the elements impacting coastal communities worldwide and transforming these environments Coastal hazards such as storm events with associated storm surges are increasing in frequency and intensity as are marine heatwaves that devastate coral reefs Human activities like sewage discharge overfishing navigation channel dredging land reclamation the construction of shipping ports and marine plastics are also responsible for coastal pollution and degradation Therefore a good understanding of the current state of coastal environments and lessons learnt from these human influences is extremely valuable to restore and protect these habitats and ecosystems from further environmental degradation and even catastrophe In this book case studies are used to tell a story about how these environments respond to severe human induced perturbations and what has gone right and wrong from environmental and resource management point of view The readership of the book include high level undergraduate Oceanography students and workers from Coastal Engineering and Management

Challenges in Estuarine and Coastal Science John Humphreys,Sally Little,2022-03-07

Estuarine and coastal waters are acknowledged centres for anthropogenic impacts Superimposed on the complex natural interactions between land rivers and sea are the myriad consequences of human activity a spectrum ranging from locally polluting effluents to some of the severest consequences of global climate change For practitioners academics and students in the field of coastal science and policy this timely book examines and exemplifies current and future challenges from upper estuaries to open coasts and adjacent seas from tropical to temperate latitudes from Europe to Australia This authoritative volume marks the 50th anniversary of the Estuarine and Coastal Sciences Association Drawing on the expertise of more than 60 specialist contributors individual chapters address coastal erosion and deposition open shores to estuaries and deltas marine plastics coastal squeeze and habitat loss tidal freshwaters saline incursion and estuarine squeeze restoration management using remote data collection carbon storage species distribution and non natives shorebirds Modelling environmental change physical processes such as sediments and modelling sea level rise and estuarine tidal dynamics estuaries as fish nurseries policy versus reality in coastal conservation developments in estuarine coastal and marine management In addition to providing an overview of current scientific

**River Sedimentation** Silke Wieprecht, Stefan Haun, Karolin Weber, Markus Noack, Kristina Terheiden, 2016-11-30 Sediment dynamics in fluvial systems is of great ecological economic and human health related significance worldwide Appropriate management strategies are therefore needed to limit maintenance costs as well as minimize potential hazards to the aquatic and adjacent environments Human intervention ranging from nutrient pollutant release to physical modifications has a large impact on sediment quantity and quality and thus on river morphology as well as on ecological functioning Truly understanding sediment dynamics requires as a consequence a multidisciplinary approach River Sedimentation contains the peer reviewed scientific contributions presented at the 13th International Symposium on River Sedimentation ISRS 2016 Stuttgart Germany 19 22 September 2016 and includes recent accomplishments in theoretical developments numerical modelling experimental laboratory work field investigations and monitoring as well as management methodologies *Flow, Mass Transport and Ecological Process in Land-Freshwater-Marine Ecosystems on Earth* Weijie Wang, Senlin Zhu, Guotao Cui, 2023-12-05
