Jones,2020-11-17 This book is about describing the meaning of programming languages The author teaches the skill of writing semantic descriptions as an efficient way to understand the features of a language While a compiler or an interpreter offers a form of formal description of a language it is not something that can be used as a basis for reasoning about that language nor can it serve as a definition of a programming language itself since this must allow a range of implementations By writing a formal semantics of a language a designer can yield a far shorter description and tease out analyse and record design choices Early in the book the author introduces a simple notation a meta language used to record descriptions of the semantics of languages In a practical approach he considers dozens of issues that arise in current programming languages and the key techniques that must be mastered in order to write the required formal semantic descriptions The book concludes with a discussion of the eight key challenges delimiting a language concrete representation delimiting the abstract content of a language recording semantics deterministic languages operational semantics non determinism context dependency modelling sharing modelling concurrency and modelling exits The content is class tested and suitable for final year undergraduate and postgraduate courses It is also suitable for any designer who wants to understand languages at a deep level Most chapters offer projects some of these quite advanced exercises that ask for complete descriptions of languages and the book is supported throughout with pointers to further reading and resources As a prerequisite the reader should know at least one imperative high level language and have some knowledge of discrete mathematics notation for logic and set theory **Formal Specification Languages** Source Wikipedia,2013-09 Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online Pages 48 Chapters Abstract machine notation Action semantics Algebraic semantics computer science Alloy specification language Assertion definition language Axiomatic semantics B Method Behavior of coupled DEVS Behavior of DEVS BSDL Common Algebraic Specification Language Construction and Analysis of Distributed Processes CoreASM Denotational semantics Duration calculus Eiffel programming language ESC Java Event segment Extended ML Formal specification Java Modeling Language Language Of Temporal Ordering Specification Larch family LePUS3 Maude system Message sequence chart Meta IV specification language OBJ3 Object Constraint Language OBJ programming language Operational semantics Perfect Developer Petri net PowerDEVS Predicative programming Property Specification Language Prototype Verification System RAISE Refinement calculus Rodin tool Rosetta lang Sing Sharp SPARK programming language Specification and Description Language Spec
