Image Objects Jacob Gaboury,2021-08-03 How computer graphics transformed the computer from a calculating machine into an interactive medium as seen through the histories of five technical objects Most of us think of computer graphics as a relatively recent invention enabling the spectacular visual effects and lifelike simulations we see in current films television shows and digital games In fact computer graphics have been around as long as the modern computer itself and played a fundamental role in the development of our contemporary culture of computing In Image Objects Jacob Gaboury offers a prehistory of computer graphics through an examination of five technical objects an algorithm an interface an object standard a programming paradigm and a hardware platform arguing that computer graphics transformed the computer from a calculating machine into an interactive medium Gaboury explores early efforts to produce an algorithmic solution for the calculation of object visibility considers the history of the computer screen and the random access memory that first made interactive images possible examines the standardization of graphical objects through the Utah teapot the most famous graphical model in the

history of the field reviews the graphical origins of the object oriented programming paradigm and finally considers the development of the graphics processing unit as the catalyst that enabled an explosion in graphical computing at the end of the twentieth century The development of computer graphics Gaboury argues signals a change not only in the way we make images but also in the way we mediate our world through the computer and how we have come to reimagine that world as computational

Computer Graphics Robert D. Parslow,2012-12-06 About four or five years ago one began to hear about the enormous interest being taken in on line consoles and displays Nothing much was done with them but computer men felt that this was the way computing ought to go one might dispense with cards and overcome many of the problems of man machine communication It quickly appeared that as with computers there had been a great under estimation of the amount of work involved of the difficulties of programming and of the cost So it began to

emerge that graphics was not the ultimate answer in spite of superb demonstrations where one might watch a square being converted into a cube and then rotated But my mind goes back to 1951 and the first computers There there were demonstrations of arithmetic speed and storage facility but not much idea of actual use However we now understand how to use computers and in the last year or two significant developments in the field of graphics have led to genuine applications and economic benefits The equipment is still expensive but it is becoming cheaper more uses are being found and I believe that we are just at the stage when the subject is gaining momentum to become like computers a field of immense importance
