Understanding Suicide:

Understanding Suicide and Its Prevention Federico Sanchez, 2010-06-15 Finally a book that explains suicide using the latest research in suicidology A must read for mental health professionals and the survivors of suicide who want to understand why suicide happens The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic that is hardly covered in medical schools due to the lack of a coherent theory of the brain in general and suicide in particular This is an important book for all professionals who deal with mental disorders in general and suicide in particular It is the author s fifth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering mental disorders The author begins with a brief summary of the statistics of the whos the hows and the wheres of suicide This gives us a clear idea of the magnitude of the problem of suicide of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole Then as an important first step to understanding the medical community s standard approaches to mental disease he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders He presents the most accepted current theories and models of suicide He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation And he explains how suicide risk assessment is currently done along with other important considerations He proceeds to explain in everyday language where possible his theory of how the brain works beginning with a simple explanation of how neurons communicate with each other Later he explains how the brain controls the body and how we see with the back of our heads how memory systems become a logical extension or expansion of our sensory and motor systems Awareness and attention are introduced first as an evolutionary tool that aids the senses gather more information from the environment and ultimately as tools that aid in thinking reasoning and constructing our past our lives and our identities But all this would mean nothing without the introduction of emotions and how the brain constructs contexts He explains how emotions are an integral part of memories and how these are related to contexts how basically the brain has created a very concise and compact filing memory system A clear explanation of how emotions are triggered regulated and dissipated is next These lead to a learned discussion of how these various systems can go haywire causing mental disorders A brief but perhaps new and revolutionary approach to these mental disorders is presented next including Obsessive Compulsive Disorder Delirium Dementia and Other Amnestic Disorders Manic Depression and Depression and Schizophrenia Ultimately it becomes clear how under certain conditions these disorders can lead to suicide The difference between attempters and completers is also explained He then presents a suicide autopsy as an exercise to show how varied the opinions of experts in the field of suicidology are and compares it to his own theories and lets the reader decide for himself who is closer to the truth The fallacy of many expert opinions of where research needs to go is presented The book gives a few words of advice on various therapies and the rationality of their approaches and

cautions against their limitations The book devotes a chapter to suicide prevention in the military and how these efforts are bound to fail and another chapter on suicide prevention The author makes important suggestions of how to prevent suicide and lessen suicide rates particularly among the young And lastly a chapter is devoted to the specifics of grief for suicide survivors

suicidal lives **Death Is Not the Answer** Anjali Chhabria,2016-10-26 Did you know that India is the world's suicide capital with over 2.6 lakh cases reported every year. But what we know about the causes of suicide lags far behind our knowledge of many other life-threatening illnesses partly because the stigma surrounding suicidal behaviour has limited society's investment in suicide research. It is said that more than 50 per cent of all those who attempt suicide tell someone about their intention. So how do you recognize suicidal symptoms in people around you and get help. From insights into the mind of a suicidal patient and understanding why one is driven to suicide to the right kind of intervention when suicide has been attempted and a list of suicide hotlines this book is an attempt to help thousands who are questioning the motive of their life. It is just as useful to anyone who has lost a loved one to suicide and is looking for a way to overcome grief. *Cry of Pain* J. Mark G. Williams, Mark Williams,2014-07-03 Suicide presents a real and often tragic puzzle for the family and friends of someone who has committed or attempted suicide. Why did they do it? How could they do this? Why did they not see there was help available? For therapists and clinicians who want to help those who are vulnerable and their families there are also puzzles that often seem unsolvable. What is it that causes someone to end his or her own life or to harm themselves? Is it down to a person's temperament, the biology of their genes, or to social conditions? What provides the best clue to a suicidal person's thoughts and behaviour? Each type of explanation seen in isolation has its drawbacks, so we need to see how they may fit together to give a more complete picture. *Cry of Pain* examines the evidence from a social psychological and biological perspective to see if there are common features that might shed light on suicide. Informative and sympathetically written, it is essential reading for therapists and mental health professionals as well as those struggling with suicidal feelings, their families and friends.
