Shape Understanding System Zbigniew Les, Magdalena Les, 2015-02-06 This is the third book presenting selected results of research on the further development of the shape understanding system SUS carried out by authors in the newly founded Queen Jadwiga Research Institute of Understanding In this book the new term Machine Understanding is introduced referring to a new area of research aiming to investigate the possibility of building machines with the ability to understand It is presented that SUS needs to some extent mimic human understanding and for this reason machines are evaluated according to the rules applied for the evaluation of human understanding The book shows how to formulate problems and how it can be tested if the machine is able to solve these problems *Software System Design and Modeling with Interactive Project Manager* SLPSoft, The Software System Design and Modeling enables us to view software in terms of a system When designing a system we start with the system requirement and then translate the system requirement to a real product By using the concept presented in this book we can design and model a system from the system requirement and then produce the UML model of the system before starting coding Some key topics discussed in this book include multiple views of a system requirement interpretation requirement application requirement duplication system function and problem solved by system agile and scrum methodology fixed system requirement and non fixed requirement incremental software development process and more Using the tools from the book you can develop a system with a full lifecycle As time goes on the tools from the book make it possible to update parts of the system that need to be updated without any frustration rather than reinventing the wheel
