Circular Economy and Sustainability Alexandros Stefanakis, Ioannis Nikolaou, Publishers' circular and booksellers' record, 1892. **Publishers' Circular and General Record of British and Foreign Literature, and Booksellers' Record**, 1892. **Circular Economy and Sustainability** Alexandros Stefanakis, Ioannis Nikolaou, 2021-09-14. The concept of circular economy is based on strategies, practices, policies, and technologies to achieve principles related to reusing, recycling, redesigning, repurposing, remanufacturing, refurbishing, and recovering water, waste materials, and nutrients to preserve natural resources. It provides the necessary conditions to encourage economic and social actors to adopt strategies toward sustainability. However, the increasing complexity of sustainability aspects means that traditional engineering and management economics alone cannot face the new challenges and reach the appropriate solutions. Thus, this book highlights the role of engineering and management in building a sustainable society by developing a circular economy that establishes and protects strong social and cultural structures based on cross-disciplinary knowledge and diverse skills. It includes theoretical justification, research studies, and case studies to provide researchers, practitioners, professionals, and policymakers the appropriate context to work together in promoting sustainability and circular economy thinking.

Volume 1: **Circular Economy and Sustainability: Management and Policy** discusses the content of circular economy principles and how they can be realized in the fields of economy, management, and policy. It gives an outline of the current status and perception of circular economy at the micro, meso, and macro levels to provide a better understanding of its role to achieve sustainability.

Volume 2: **Circular Economy and Sustainability: Environmental Engineering** presents various technological and developmental tools that emphasize the implementation of these principles in practice at the micro level. It demonstrates the necessity to establish a fundamental connection between sustainable engineering and circular economy. Presents a novel approach linking circular economy concept to environmental engineering and management to promote sustainability goals in modern societies. Approaches the topic of production and

consumption at both the micro and macro levels integrating principles with practice Offers a range of theoretical and foundational knowledge in addition to case studies that demonstrate the potential impact of circular economy principles on economic and societal progress
