Turbulence Control by Passive Means E. Coustols, 2012-12-06 Proceedings of the 4th European Drag Reduction Meeting

Turbulence Structure and Modulation Alfredo Soldati, Rosesella Monti, 2014-05-04 Controlling turbulence is an important issue for a number of technological applications Several methods to modulate turbulence are currently being investigated All of them are based on the introduction of some sort of perturbation into the flow field which affect turbulence coherent structures responsible for turbulence transfer mechanisms The scope of the book is to describe several aspects of turbulence structure and modulation and to explain and discuss the most promising techniques in detail **Wall**

Turbulence Control Sedat Tardu, 2017-02-07 Wall turbulence control is a major subject the investigation of which involves significant industrial environmental and fundamental consequences Wall Turbulence Control addresses recent advances achieved in active and passive wall turbulence control over the past two decades This valuable reference for scientists researchers and engineers provides an updated view of the research into this topic including passive control optimal and suboptimal control methodology linear control and control using adaptive methods neural networks polymer and bubble injection electromagnetic control and recent advances in control by plasma *Turbulent Drag Reduction by Passive Means*

Royal Aeronautical Society, 1987 *Eddy Structure Identification in Free Turbulent Shear Flows* J.P. Bonnet, M.N.

Glauser, 2012-12-06 The existence and crucial role played by large scale organized motions in turbulent flows are now recognized by industrial applied and fundamental researchers alike It has become increasingly evident that coherent structures influence mixing noise vibration heat transfer drag etc The acceleration of the development of both experimental and computational programs devoted to this topic has been evident at several recent international meetings One of the first questions which experimentalists or numerical analysts are faced with is how can these structures be separated from the background turbulence This is a nontrivial task because the coherent structures are generally embedded in a random field and the technique used to determine when and where certain structures are passing or their averaged characteristics in the more probable or dominant role sense is directly related to the definition of the coherent structure Several methods or approaches are available and the choice of a particular one is generally dependent on the desired information This choice depends not only on the definition of the structure but also on the experimental and numerical capabilities available to the researcher *Recent Developments in Turbulence Management* K.-S. Choi, 2012-12-06 The European Drag Reduction Meeting has been held on 15th and 16th November 1990 in London This was the fifth of the annual European meetings on drag reduction in engineering flows The main objective of this meeting was to discuss up to date results of drag reduction research carried out in Europe The organiser has adopted the philosophy of discussing the yesterday's results rather than the last year's results No written material has therefore been requested for the meeting It was only after the meeting the submission of papers was requested to the participants from which 16 papers were selected for this proceedings volume The

meeting has attracted a record number of participants with a total of 52 researchers from seven European countries U K France Germany the Netherlands Italy Switzerland and U S S R as well as from Japan Canada and Australia The subjects covered in this proceedings volume include riblets LEBUs Large Eddy Break Up device surface roughness compliant surfaces and polymer additives Riblets seem to be one of the most extensively studied devices in the past years Reflecting this situation in the European community there are six papers on riblets covering their practical applications to aircraft and to a model ship near wall coherent structure of the boundary layer and effects of flow three dimensionality Possibility of heat transfer enhancement with riblets and potential use in the laminar flow are also investigated An analytical model is developed for the boundary layer with a LEBU device Further Developments in Turbulence Management K. Krishna Prasad,2012-12-06 The thrust of modern research on turbulence in fluids is concerned with coherent structures and modelling Riblets have been shown to reduce drag and the papers presented in this volume tackle the main question of the mechanism responsible for this behaviour in turbulent flow The contributions in this volume were presented at the Sixth Drag Reduction Meeting held at Eindhoven during November 1991 This volume will be a useful reference work for engineers physicists and applied mathematicians interested in the topic of fluid turbulence *Computational Fluid Dynamics '94* Siegfried Wagner, Jacques Periaux, Ernst-Heinrich Hirschel,1994 30th AIAA Fluid Dynamics Conference ,1999

Microfluidics Stéphane Colin,2013-05-06 The recent development of microscale technologies makes it possible to design complex microsystems devoted to transport dosing mixing analysis or even synthesis of fluids Applications are numerous and exist in almost every industrial field from biotechnology and healthcare to aeronautics and advanced materials manufacturing Microfluidics is a relatively new research area usually comprising work with microsystems and involving internal fluid flows with characteristic dimensions of the order of one micrometer 1×10^{-6} m This book provides engineers and researchers with a range of tools for modeling experimenting on and simulating these microflows as a preliminary step in designing and optimizing fluidic microsystems The various consequences of miniaturization on the hydrodynamics of gas liquid or two phase flows as well as on associated heat transfer phenomena are analyzed The book is illustrated with examples that demonstrate the wide diversity of applications and the breadth of novel uses of these fluidic microsystems

25th AIAA Fluid Dynamics Conference ,1994 **Proceedings of the International Symposium on Seawater Drag Reduction** ,1998 **Special Course on Skin Friction Drag Reduction** ,1992 *IUTAM Symposium on Asymptotic Methods for Turbulent Shear Flows at High Reynolds Numbers* K. Gersten,1996-07-31 This volume contains the contributions presented at the IUTAM Symposium on Asymptotic Methods for Turbulent Shear Flows which was the first international conference on the subject The book provides an overview of the state of the art in this field and presents results found worldwide Asymptotic theory is here considered as the application of perturbation methods singular perturbation methods multiscale methods rapid distortion theory etc to solving the Reynolds averaged flow equations for turbulent shear flows at

high Reynolds numbers These methods play an important role in turbulence modelling as is demonstrated by many examples including turbulence models describing flow separation It becomes evident that asymptotic methods enable the extraction of a fairly comprehensive set of results from the governing equations without incorporating a specific turbulence model a priori Furthermore these methods can be used to quickly eliminate unsatisfactory models The book contains valuable results for turbulence researchers in particular for those working in turbulence modelling Computational Fluid Dynamics Review 1995 M. M. Hafez, K. Oshima, 1996-12-04 The success of CFD as a tool for the analysis of many fundamental and practical fluid dynamics problems justifies this publication which serves as a state of the art reference capturing the multidisciplinary spirit of CFD in SI in depth articles Together they provide a comprehensive review of research on fluid flow viscous flow incompressible and compressible and turbulence needs testing of previously advocated fundamental concepts and computer based techniques Findings from numerous international conferences are also shared **International Aerospace Abstracts**, 1995 **Proceedings of the 5th International Symposium on Fluid-Structure Interactions, Aeroelasticity, Flow-Induced Vibration and Noise** M. P. Paidoussis, 2002 *The Cumulative Book Index*, 1991 A world list of books in the English language **Turbulent Shear Flows 8** F. Durst, 1993 This volume contains a selection of the papers presented at the Eighth Symposium on Turbulent Shear Flows held at the Technical University of Munich 9-11 September 1991 The first of these biennial international symposia was held at the Pennsylvania State University USA in 1977 subsequent symposia have been held at Imperial College London England the University of California Davis USA the University of Karlsruhe Germany Cornell University Ithaca USA the Paul Sabatier University Toulouse France and Stanford University California USA The purpose of this series of symposia is to provide a forum for the presentation and discussion of new developments in the field of turbulence especially as related to shear flows of importance in engineering and geophysics From the 330 extended abstracts submitted for this symposium 145 papers were presented orally and 60 as posters Out of these we have selected twenty four papers for inclusion in this volume each of which has been revised and extended in accordance with the editors recommendations The following four theme areas were selected after consideration of the quality of the contributions the importance of the area and the selection made in earlier volumes wall flows separated flows compressibility effects buoyancy rotation and curvature effects As in the past each section corresponding to the above areas begins with an introduction by an authority in the field that places the individual contributions in context with one another and with related research Preprints for the ...
