South Carolina's Turkish People Terri Ann Ognibene, Glen Browder, 2018-04-15 The story of misunderstood immigrants and their struggle to gain recognition and acceptance in the rural South Despite its reputation as a melting pot of ethnicities and races the United States has a well documented history of immigrants who have struggled through isolation segregation discrimination oppression and assimilation South Carolina is home to one such group known historically and derisively as the Turks which can trace its oral history back to Joseph Benenhaley an Ottoman refugee from Old World conflict According to its traditional narrative Benenhaley served with Gen Thomas Sumter in the Revolutionary War His dark hued descendants lived insular lives in rural Sumter County for the next two centuries and only in recent decades have they enjoyed the full blessings of the American experience Early scholars ignored the Turkish tale and labeled these people tri racial isolates and later writers disparaged them as so called Turks But members of the group persisted in claiming Turkish descent and living reclusively for generations Now in South Carolina s Turkish People Terri Ann Ognibene and Glen Browder confirm the group s traditional narrative through exhaustive original research and oral interviews In search of definitive documentation Browder combed through a long list of primary sources including historical reports public records and private papers He also devised new evidence such as a reconstruction of Turkish lineage of the 1800s through genealogical analysis and genetic testing Ognibene a descendant of the state s Turkish population conducted personal interviews with her relatives who had been in the community since the 1900s They talked at length and passionately about their cultural identity their struggle for equal rights and the mixed benefits of assimilation Ognibene s and Browder s findings are clear South Carolina s Turkish people finally know and can celebrate their heritage

Turkish Literature Epiphanius Wilson, 1901 *Handbook of cheese in health: production, nutrition and medical sciences* Victor R. Preedy, Ronald Ross Watson, Vinood B. Patel, 2023-08-07

Cheeses are one of the most diverse food commodities known. They have a wide range of regional and geographical differences in manufacture, taste, texture, colour and contribution to the diet. Because cheese is an important source of macro and micro nutrients it can be seen as a valuable product in human nutrition. However, some consider that traditionally manufactured cheeses may not contribute to optimal health. For this reason there is a drive to produce types with reduced or modified fat or salt contents. Another aspect that affects human health is that cheese may also harbour harmful pathogens in some circumstances. To gain a holistic understanding of cheese in health, nutritionists and dieticians have a fundamental need to grasp the process of cheese manufacture while cheese manufacturers benefit by understanding the health related aspects of cheese. This handbook bridges the intellectual and trans disciplinary divide and provides a balanced overview of cheese in relation to health. Experts provide a comprehensive coverage of subjects in relation to cheese production, nutrition and medical sciences such as composition and health benefits, toxicology, metabolic and nutritional effects and microbiology.

Novel Chemical, Microbiological and Physical Approaches In Food Safety Control, volume II Marco Iammarino, Sara Panseri, Gulhan Unlu, Speranza Barbara, Antonio Bevilacqua, Rosalia Zianni, 2024-11-21

One of the most important emerging aspects that requires further research in food safety is the simultaneous presence of different contaminants both microbiological and chemical in the same food, the so called cocktail effect. Large amounts of data are needed for these evaluations since the huge number of interactions among different contaminants which maybe hypothesized have to be statistically evaluated before confirming an effective risk. Moreover the range of food to take into account within these studies is very wide. In order to obtain comprehensive datasets new approaches are needed. These approaches composed of new analytical procedures, microbiological protocols and chemical

physical determinations should allow the quick and economic obtainment of many parameters possibly respecting the environment in the green chemistry perspective
