Tutorials in Mathematical Biosciences I Alla Borisyuk, G. Bard Ermentrout, Avner Friedman, David H. Terman, 2005-02-18 This volume introduces some basic theories on computational neuroscience Chapter 1 is a brief introduction to neurons tailored to the subsequent chapters Chapter 2 is a self contained introduction to dynamical systems and bifurcation theory oriented towards neuronal dynamics The theory is illustrated with a model of Parkinson s disease Chapter 3 reviews the theory of coupled neural oscillators observed throughout the nervous systems at all levels it describes how oscillations arise what pattern they take and how they depend on excitory or inhibitory synaptic connections Chapter 4 specializes to one particular neuronal system namely the auditory system It includes a self contained introduction from the anatomy and physiology of the inner ear to the neuronal network that connects the hair cells to the cortex and describes various models of subsystems [Tutorials in Mathematical Biosciences](#) ,2005 *Tutorials in Mathematical Biosciences IV* Avner Friedman, 2008-04-26 This book offers an introduction to fast growing research areas in evolution of species population genetics ecological models and population dynamics It reviews the concept and methodologies of phylogenetic trees introduces ecological models examines a broad range of ongoing research in population dynamics and deals with gene frequencies under the action of migration and selection The book features computational schemes illustrations and mathematical theorems *Tutorials in Mathematical Biosciences* ,2008 [Tutorials in Mathematical Biosciences I](#) Alla Borisyuk, G. Bard Ermentrout, Avner Friedman, David H. Papanicolaou, 2008-04-17 In the CIME Summer School on Imaging experts in mathematical techniques and applications presented useful introductions to many aspects of

the field This volume contains updated lectures as well as additional contributions on other related topics *Algebraic Groups and Lie Groups with Few Factors* Alfonso Di Bartolo,2008-04-17 This volume treats algebraic groups from a group theoretical point of view and compares the results with the analogous issues in the theory of Lie groups It examines a classification of algebraic groups and Lie groups having only few subgroups **Enumerative Invariants in Algebraic Geometry and String Theory** Marcos Marino,Michael Thaddeus,Ravi Vakil,2008-08-22 Starting in the middle of the 80s there has been a growing and fruitful interaction between algebraic geometry and certain areas of theoretical high energy physics especially the various versions of string theory Physical heuristics have provided inspiration for new mathematical definitions such as that of Gromov Witten invariants leading in turn to the solution of problems in enumerative geometry Conversely the availability of mathematically rigorous definitions and theorems has benefited the physics research by providing the required evidence in fields where experimental testing seems problematic The aim of this volume a result of the CIME Summer School held in Cetraro Italy in 2005 is to cover part of the most recent and interesting findings in this subject *Singular Stochastic Differential Equations* Alexander S. Cherny,Springer Science+Business Media,2005

Large random matrices Alice Guionnet,2009-03-25 These lectures emphasize the relation between the problem of enumerating complicated graphs and the related large deviations questions Such questions are closely related with the asymptotic distribution of matrices **Affine Density in Wavelet Analysis** Gitta Kutyniok,2007-06-07 In wavelet analysis irregular wavelet frames have recently come to the forefront of current research due to questions concerning the robustness and stability of wavelet algorithms A major difficulty in the study of these systems is the highly sensitive interplay between geometric properties of a sequence of time scale indices and frame properties of the associated wavelet systems This volume provides the first thorough and comprehensive treatment of irregular wavelet frames by introducing and employing a new notion of affine density as a highly effective tool for examining the geometry of sequences of time scale indices Many of the results are new and published for the first time Topics include qualitative and quantitative density conditions for existence of irregular wavelet frames non existence of irregular co affine frames the Nyquist phenomenon for wavelet systems and approximation properties of irregular wavelet frames *Paris-Princeton Lectures on Mathematical Finance ...* ,2004

LNM ,2008 Contents of 1 14 1966 67 1978 79 in v 15 1979 80 **Mathematical Foundations of Neuroscience** G. Bard Ermentrout,David H. Terman,2010-07-08 Arising from several courses taught by the authors this book provides a needed overview illustrating how dynamical systems and computational analysis have been used in understanding the types of models that come out of neuroscience *Dynamical Systems, Graphs, and Algorithms* George Osipenko,2007 The modern theory and practice of dynamical systems requires the study of structures that fall outside the scope of traditional subjects of mathematical analysis An important tool to investigate such complicated phenomena as chaos and strange attractors is the method of symbolic dynamics This book describes a family of the algorithms to study global structure of systems By a finite

covering of the phase space we construct a directed graph symbolic image with vertices corresponding to cells of the covering and edges corresponding to admissible transitions The method is used to localize the periodic orbits and the chain recurrent set to construct the attractors and their basins to estimate the entropy Lyapunov exponents and the Morse spectrum to verify the hyperbolicity and the structural stability Considerable information can be obtained thus and more techniques may be discovered in future research

Graduate Programs in the Physical Sciences, Mathematics, Agricultural Sciences, the Environment, and Natural Resources 2009 Peterson's,2007-11 The six volumes of Peterson's Annual Guides to Graduate Study the only annually updated reference work of its kind provide wide ranging information on the graduate and professional programs offered by accredited colleges and universities in the United States and U S territories and those in Canada Mexico Europe and Africa that are accredited by U S accrediting bodies Books 2 through 6 are divided into sections that contain one or more directories devoted to individual programs in a particular field Book 4 contains more than 3 800 programs of study in 56 disciplines of the physical sciences mathematics agricultural sciences the environment and natural resources

Mathematical Reviews ,2007 *Local and Semi-Local Bifurcations in Hamiltonian Dynamical Systems* Heinz Hanßmann,2007 Once again KAM theory is committed in the context of nearly integrable Hamiltonian systems While elliptic and hyperbolic tori determine the distribution of maximal invariant tori they themselves form n parameter families Hence without the need for untypical conditions or external parameters torus bifurcations of high co dimension may be found in a single given Hamiltonian system The text moves gradually from the integrable case in which symmetries allow for reduction to bifurcating equilibria to non integrability where smooth parametrisations have to be replaced by Cantor sets Planar singularities and their versal unfoldings are an important ingredient that helps to explain the underlying dynamics in a transparent way
