Unveiling The Universe:

Unveiling the Universe. Where We are and what We Are, as Told by the Telescope and Spectroscope. A ... Description of the Sun, Moon, Earth, Planets, Stars, Etc. [With Illustrations]. Norton WAGNER,1936 Unveiling the Universe J.E. van Zyl,2012-12-06 Many books on general astronomy have been published in recent years but this one is exceptional in several respects It not only provides the complete newcomer to astronomy with a broad picture covering all aspects historical observational space research methods cosmology but it also presents enough more advanced material to enable the really interested student to take matters further Astronomy is essentially a mathematical science but there are many people who are anxious to take more than a passing interest and yet are not equipped to deal with mathematical formulae In this book therefore the mathematical sections are deliberately separated out so that they can be passed over without destroying the general picture The result is that the book will be equally useful to beginners to more advanced readers and to those who really want to go deeply into the subject for instance at university level The whole text is written with admirable clarity and there are excellent illustrations together with extensive appendices which give lists of objects of various types together with more detailed mathematical explanations All in all the book may be said to bridge the gap between purely popular works and more advanced treatises as such it deserves a very wide circulation and it will undoubtedly run to many future editions
