Remote Sensing and Urban Analysis Jean-Paul Donnay, Mike J. Barnsley, Paul A. Longley, 2003-09-02 One

of the key geographical developments over the last two centuries has been that of urbanisation. In recent years this has exploded globally particularly in developing countries. It is essential for governments, planners and researchers in geography and allied fields to understand this process and the main way of being able to do this is to accurately map these changes. The main method of this mapping is Remote Sensing. This up to date analysis of the area looks at a wide range of methodologies currently being used to produce and analyse remotely sensed data of urban areas. The authors examine the various techniques used to extract information from digital multispectral images of urban areas. Donnay and Barnsley then go on to look at the identification of urban forms, the delineation of agglomerations and the development of urban morphology considering the analysis of integrated data sets and surface models and going on to look at the estimation of human population levels.

Applied Urban Analysis Ian Cullen, 2013-04-15. Much of the theoretical literature in planning and human geography at present is materialist in perspective. This offers a powerful critique but locates the dynamics of urban systems too specifically in just one basic social relationship. It fails to provide an intellectual base broad enough for constructive, detailed urban analysis, partly because it fails to do justice to the reflective awareness of the individual. The alternative humanist position redresses the balance in favour of the individual but again cannot serve the practical requirements of urban analysis since it so often ignores social or contextual analysis. Ian Cullen synthesizes these two apparently inconsistent theoretical positions and to render the increasingly obscure debate between them accessible. This book was first published in 1984.

A Survey and Analysis of Available Budget and Income Data for Urban Groups Martha Scott Epps, 1927.

Methods of Urban Analysis Philip M. Hauser, Otis Dudley Duncan, Beverly Duncan, 1956. A summary of the work of the Chicago Urban Analysis Project.

Concepts and Techniques in Urban Analysis Bola Ayeni, 2017-10-12. This book, first published in 1979, discusses the concepts, models and techniques used in urban analysis and planning. This study reviews many of the older concepts and models of urban spatial structure, laying the foundations of analysis carried out in the later parts of the book. Topics such as social area analysis, urban economic activity and spatial interaction are considered. This comprehensive study of geography and planning presents a distinctive contribution to the understanding of the nature of the city and its inherent problems.

Selected Reading in Quantitative Urban Analysis Samuel J. Bernstein, W. Giles Mellon, 2013-10-22 Selected Readings in Quantitative Urban Analysis focuses on the use of quantitative approaches in analyzing urban problems. The areas discussed are overall urban models, urban models dealing with the basic economic factors of urban life: workers and jobs, housing and transportation, urban models dealing with the provision of basic services: education, health care, fire, police, water, and sanitation, urban models dealing with the provision of the luxuries of urban life: theater, ballet, symphony, urban models dealing with how the decisions to provide these factors are made: policy formulation and the resolution of conflicting priorities. This book is comprised of 11 chapters and begins with an outline of the major areas of urban life analyzed in a quantitative manner. Urban modeling is then introduced and problems and pitfalls in urban model building are considered. The next section looks at the economic base of urban life with emphasis on labor markets and labor force, urban housing markets and housing policy, and policy and policy models in transportation. Subsequent chapters explore essential urban services including public education, community health services, fire protection, sanitation, and emergency medical services. The remaining sections discuss the amenities of urban life and urban politics and policy. This monograph should be useful to urban administrators and planners as well as students interested in urban problems.
