Frug, David J. Barron, 2013-07-02 Many major American cities are defying the conventional wisdom that suburbs are the communities of the future But as these urban centers prosper they increasingly confront significant constraints In *City Bound* Gerald E Frug and David J Barron address these limits in a new way Based on a study of the differing legal structures of Boston New York Atlanta Chicago Denver San Francisco and Seattle *City Bound* explores how state law determines what cities can and cannot do to raise revenue control land use and improve city schools Frug and Barron show that state law can make it much easier for cities to pursue a global city or a tourist city agenda than to respond to the needs of middle class residents or to pursue regional alliances But they also explain that state law is often so outdated and so rooted in an unjustified distrust of local decision making that the legal process makes it hard for successful cities to develop and implement any coherent vision of their future Their book calls not for local autonomy but for a new structure of state local relations that would enable cities to take the lead in charting the future course of urban development It should be of interest to everyone who cares about the future of American cities whether political scientists planners architects lawyers or simply citizens **Urban Innovation** Terry Nichols Clark, 1994-06-23 The book provides a wealth of statistically based evidence to substantiate or repudiate important arguments and assumptions central to the radical changes that are occurring in cities

Hambleton,2007-11-26 This book is about the role that ideas institutions and actors play in structuring how we govern cities and more specifically what projects or paths are taken Global changes require that we rethink governance and urban policy and that we do so through the dual lens of theory and practice **Urban Innovation Networks** Alexander Gutzmer,2015-11-07 This book offers fresh insights into how companies can engage with and make use of the modern metropolis Based on actor network theory and the resource based view of the firm it demonstrates how the contemporary city can be seen and used as a resource for corporate innovation The main argument is that companies have to build what the author calls urban innovation networks After a theory based outline of such networks the author demonstrates the extent to which different institutional players companies such as Audi Ikea and Siemens but also arts institutions like the Haus der Kunst in Munich are already working to create them The book combines management thinking with urban theory and the sociology of networks to create a unique blend of different views of capitalism and space offering a new perspective on both the modern metropolis and globally operating companies active within our distinctly urban culture How Cities Will Save the World Ray Brescia,John Travis Marshall,2016-06-03 Cities are frequently viewed as passive participants to state and national efforts to solve the toughest urban problems But the evidence suggests otherwise Cities are actively devising innovative policy solutions and they have the potential to do even more In this volume the authors examine current threats to communities across the U S and the globe They draw on first hand experience with and accounts of the crises already precipitated by climate change population shifts and economic inequality This volume is distinguished however by its central objective of traveling beyond a description of problems and a discussion of their serious implications Each of the thirteen chapters frame specific recommendations and guidance on the range of core capacities and interventions that 21st Century cities would be prudent to consider in mapping their immediate and future responses to these critical problems How Cities Will Save the World brings together authors with frontline experience in the fields of city redevelopment urban infrastructure healthcare planning immigration historic preservation and local government administration They not only offer their ground level view of threats caused by climate change population shifts and economic inequality but they provide solution driven narratives identifying promising innovations to help cities tackle this century s greatest adversities *Sustainable Cities* Simon Joss,2017-08-24 Interest in the sustainable city is growing around the world and with it come important questions about governing sustainable urban development Why are there blockages to achieving the goal of a sustainable city How is it possible to overcome the practical difficulties that initiatives often face And how can an increasingly technocratic focus be rebalanced with more of a public perspective In this wide ranging text Simon Joss examines mainstream policy and practice and looks at the approaches that

can overcome some of their drawbacks The author examines the core elements of sustainable planning and how processes of innovation governance and policy making work together to achieve sustainable urban change He assesses the various challenges faced at both the domestic and international level and across a range of urban scales These challenges include how to resolve environmentally problematic ways of city living at the same time as providing for urban social and economic development and how to adapt the idea and reality of the sustainable city to different geopolitical contexts The author recognizes that there is no one size fits all solution and examines the range of methods available In an era where entirely new eco cities are being built and established ones being retro fitted in response to environmental pressures this text looks at the varying successes of the urban sustainability movement and its relationship to the planners policy makers and citizens who are inseparable from it Providing an accessible account of the latest developments in research and policy as well as examples from around the world this is indispensable reading for students researchers and practitioners alike

New York Court of Appeals. Records and Briefs. New York (State), **Funding Public Schools** Kenneth K. Wong, 1999 This book examines the fundamental role of politics in funding our public schools and fills a conceptual imbalance in the current literature in school finance and educational policy Unlike those who are primarily concerned about cost efficiency Kenneth Wong specifies how resources are allocated for what purposes at different levels of the government In contrast to those who focus on litigation as a way to reduce funding gaps he underscores institutional stalemate and the lack of political will to act as important factors that affect legislative deadlock in school finance reform Wong defines how politics has sustained various types of rules that affect the allocation of resources at the federal state and local level While these rules have been remarkably stable over the past twenty to thirty years they have often worked at cross purposes by fragmenting policy and constraining the education process at schools with the greatest needs Wong s examination is shaped by several questions How do these rules come about What role does politics play in retention of the rules Do the federal state and local governments espouse different policies In what ways do these policies operate at cross purposes How do they affect educational opportunities Do the policies cohere in ways that promote better and more equitable student outcomes Wong concludes that the five types of entrenched rules for resource allocation are rooted in existing governance arrangements and seemingly impervious to partisan shifts interest group pressures and constitutional challenge And because these rules foster policy fragmentation and embody initiatives out of step with the performance based reform agenda of the 1990s the outlook

for positive change in public education is uncertain unless fairly radical approaches are employed Wong also analyzes four allocative reform models two based on the assumption that existing political structures are unlikely to change and two that seek to empower actors at the school level The two models for systemwide restructuring aimed at intergovernmental coordination and or integrated governance would seek to clarify responsibilities for public education among federal state and local authorities above all integrating political and educational accountability The other two models identified by Wong shift control from state and district to the school one based on local leadership and the other based on market forces In discussing the guiding principles of the four models Wong takes care to identify both the potential and limitations of each Written with a broad policy audience in mind Wong s book should appeal to professionals interested in the politics of educational reform and to teachers of courses dealing with educational policy and administration and intergovernmental relations
