## **Urinary Tract Cytology:**

*The Paris System for Reporting Urinary Cytology* Eva M. Wojcik, Daniel F.I. Kurtycz, Dorothy L. Rosenthal, 2022-02-03 The first edition of *The Paris System for Reporting Urinary Cytology* introduced a completely new paradigm for detecting bladder cancer by urine cytology. This system concentrated on defining morphological characteristics of the most clinically significant form of bladder cancer, High Grade Urothelial Carcinoma. This new approach has been widely accepted throughout the world and has become part of the daily practice of cytology. Considering that the first edition of *The Paris System TPS* introduced a new model of urinary cytodiagnosis, verification and expansion of initial material and data were anticipated. Based on evolving knowledge and readership requests, the group of highly experienced authors have created a new edition of *TPS*. This second edition includes areas and issues not originally covered. A new chapter on urine cytology of the upper tract, a rarely addressed topic, has been introduced. Furthermore, the issue of cellular degeneration is discussed in the criteria of all diagnostic categories. Examples of standardized reports are included in each chapter. Most importantly, a separate chapter presents data defining the risk of malignancy (ROM) for each diagnostic category to inform clinical management. New high quality images augment those of the first edition to better illustrate diagnostic clues and potential pitfalls. In addition to chapters on diagnostic criteria, current concepts of pathogenesis of bladder cancer, specimen adequacy and preparation, and ancillary tests are covered in separate chapters. A bonus to the volume is a comprehensive history of urine as the earliest diagnostic sample of human disease, richly illustrated with artworks from major museums. Written by internationally recognized authorities, this comprehensive and evidence based guide to urine cytology is supported by the newest data confirming the original concept and significance of diagnostic criteria defining High Grade Urothelial Carcinoma. *TPS* is an essential tool for anyone who is practicing urinary cytology, including cytotechnologists, pathologists in training, and practicing pathologists. This book should find a place in every cytology laboratory throughout the world. The Concept has been endorsed by the American Society of Cytopathology and the International Academy of Cytology. *Urinary Cytology* Peter Rathert, Stephan Roth, Mark S. Soloway, 2012-12-06 Excellent illustrations and the latest technology from the clinic practice and laboratory are compiled for both the practicing urologist and the researching cytopathologist in the book *Urinary Cytology*. The completely revised and up dated text in the new second edition reflects the first common effort of urologists, pathologists, and cytopathologists to find a unified concept from conventional cytology to electron microscopy, to flow cytometry. The authors' main emphasis is on conveying practical techniques for the collection, concentration, fixation, staining, and analysis of cellular material. They clearly discuss the circumstances under which new techniques are advisable and the relevance of these techniques when difficult questions of detail arise. At the same time, basic scientific principles are presented in comprehensible form. The atlas section gives examples of urologic cytology, compares pathological with normal results, discusses the problems in differential diagnosis, and points the way to solutions. *Urinary Tract Cytology* M.
